GEA Refrigeration Technologies: Your partner for low temperatures

GEA Refrigeration Technologies, part of the internationally active GEA Group, is a synonym for industrial refrigeration technology. Since the end of the 19th century, it has been our business to cool processes and products, and to control the temperature of goods in transport. You will find our solutions in the food and beverage sector; in the petrochemical, chemical, and pharmaceutical industries; on fishing ships; in natural gas liquefaction; in infrastructure facilities; and in ice factories. We are also at the top with know-how when it comes to refrigeration at leisure facilities. After all, we have been excited about refrigeration for decades now. As a result, our staff enthusiastically goes about its development and production projects – to include preventive and remedial maintenance of your refrigeration systems.
This enthusiasm is highly apparent in the daily work of all companies in our Segment. Whether it's complete systems or individual valves: we have the experience in every section of our company to optimally design, manufacture, and install refrigeration systems. And to take full advantage of this experience, we not only carry out development in our own company: we also manufacture, assemble, and test the core components. A chain is, after all, only as strong as its weakest link: and this also applies equally well to refrigeration technology, cooling processes, and cooling chains.

This makes it all the more important that you have a partner – in GEA Refrigeration Technologies – that has learned to master refrigeration from A to Z. And all of this since 1896, when Willem Grasso founded his refrigeration division. From this history of GEA Refrigeration Technologies, you will profit in the form of technical expertise and top sector know-how.
But we all live in the present and think about the future. We ponder a future in which more and more processes need energy around the world, and fewer natural resources are available. As a result, we have taken it as our goal to create solutions that are not only long-life and cost-effective, but also energy-saving and environment-protecting. We feel obligated to sustainability in many respects. Our objective is to produce longlife and material-saving products over the long run – as well as products that use environmentally benign refrigerants. And we aim to produce efficiently. But our responsibility does not end at the factory gate. As a result, we take great pains to ensure that our systems are energy-efficient and that they protect the climate. With GEA Refrigeration Technologies, you can also count on optimal economy: saving energy indeed means reducing money spent for energy. At the same time, you protect the environment. Thanks to our refrigeration technology, your processes will run more economically and more ecologically. To maintain our standard of living and to assure quality of life for future generations as well.
Our claim of combining economy with saving natural resources is reflected in all components of our company, such as the following: compressors, chillers, heat pumps, ice machines, fittings and valves, control systems, and many, many more. You can find proof of the above throughout the world. Our international corporate network – and above all our reference projects – are spread all over the globe.

GEA Bock - More than a compressor

Over 75 years ago, when the refrigeration and air-conditioning industry was still in its infancy, our company's founder, Wilhelm Bock, had a vision: he wanted to build first-class and reliable refrigeration machines. In the following decades Bock developed into one of the world's leading manufacturers of refrigeration and air-conditioning compressors.

Today, GEA Bock offers as part of GEA Refrigeration Technologies the right compressor for all fields of commercial-, industrial-, rail-, bus- and transport refrigeration.

That GEA Bock places the highest demands on compressors for energy efficiency shows our EFC system. For many years we offer with the EFC system a solution to reduce the energy consumption by 25 %.
In this brochure we present you our current program of single-stage and two-stage semi-hermetic Bock compressors.

Be inspired. By our new products, our established product series and the entire passion that goes into each of our products.

Production Program

Semi-hermetic compressors HG (HA)

The Bock HG (Hermetic Gas-cooled) range of semi-hermetic compressors offers traditional suction gas-cooled compressor state of the art technology. These compressors of the highest quality standard excel in their running comfort, easy maintenance, efficiency and reliability. Suitable as standard for conventional or chlorine-free HFC refrigerants.
The HA (Hermetic Air-cooled) range, specially engineered by GEA Bock, is available for deep-freezing applications, in particular for use with the refrigerants R22 and R404A.

- Single-stage
- CO_2 compressors subcritical
- CO_2 compressors transcritical
- R134a compressors
- R407C compressors
- R410A compressors
- ATEX compressors
- HC compressors
- Aluminium compressors
- 2-pole compressors
- Two-stage compressors
- Duplex compressors
- Compressor units with receiver
- Condenser units air-cooled

Vehicle compressors FK

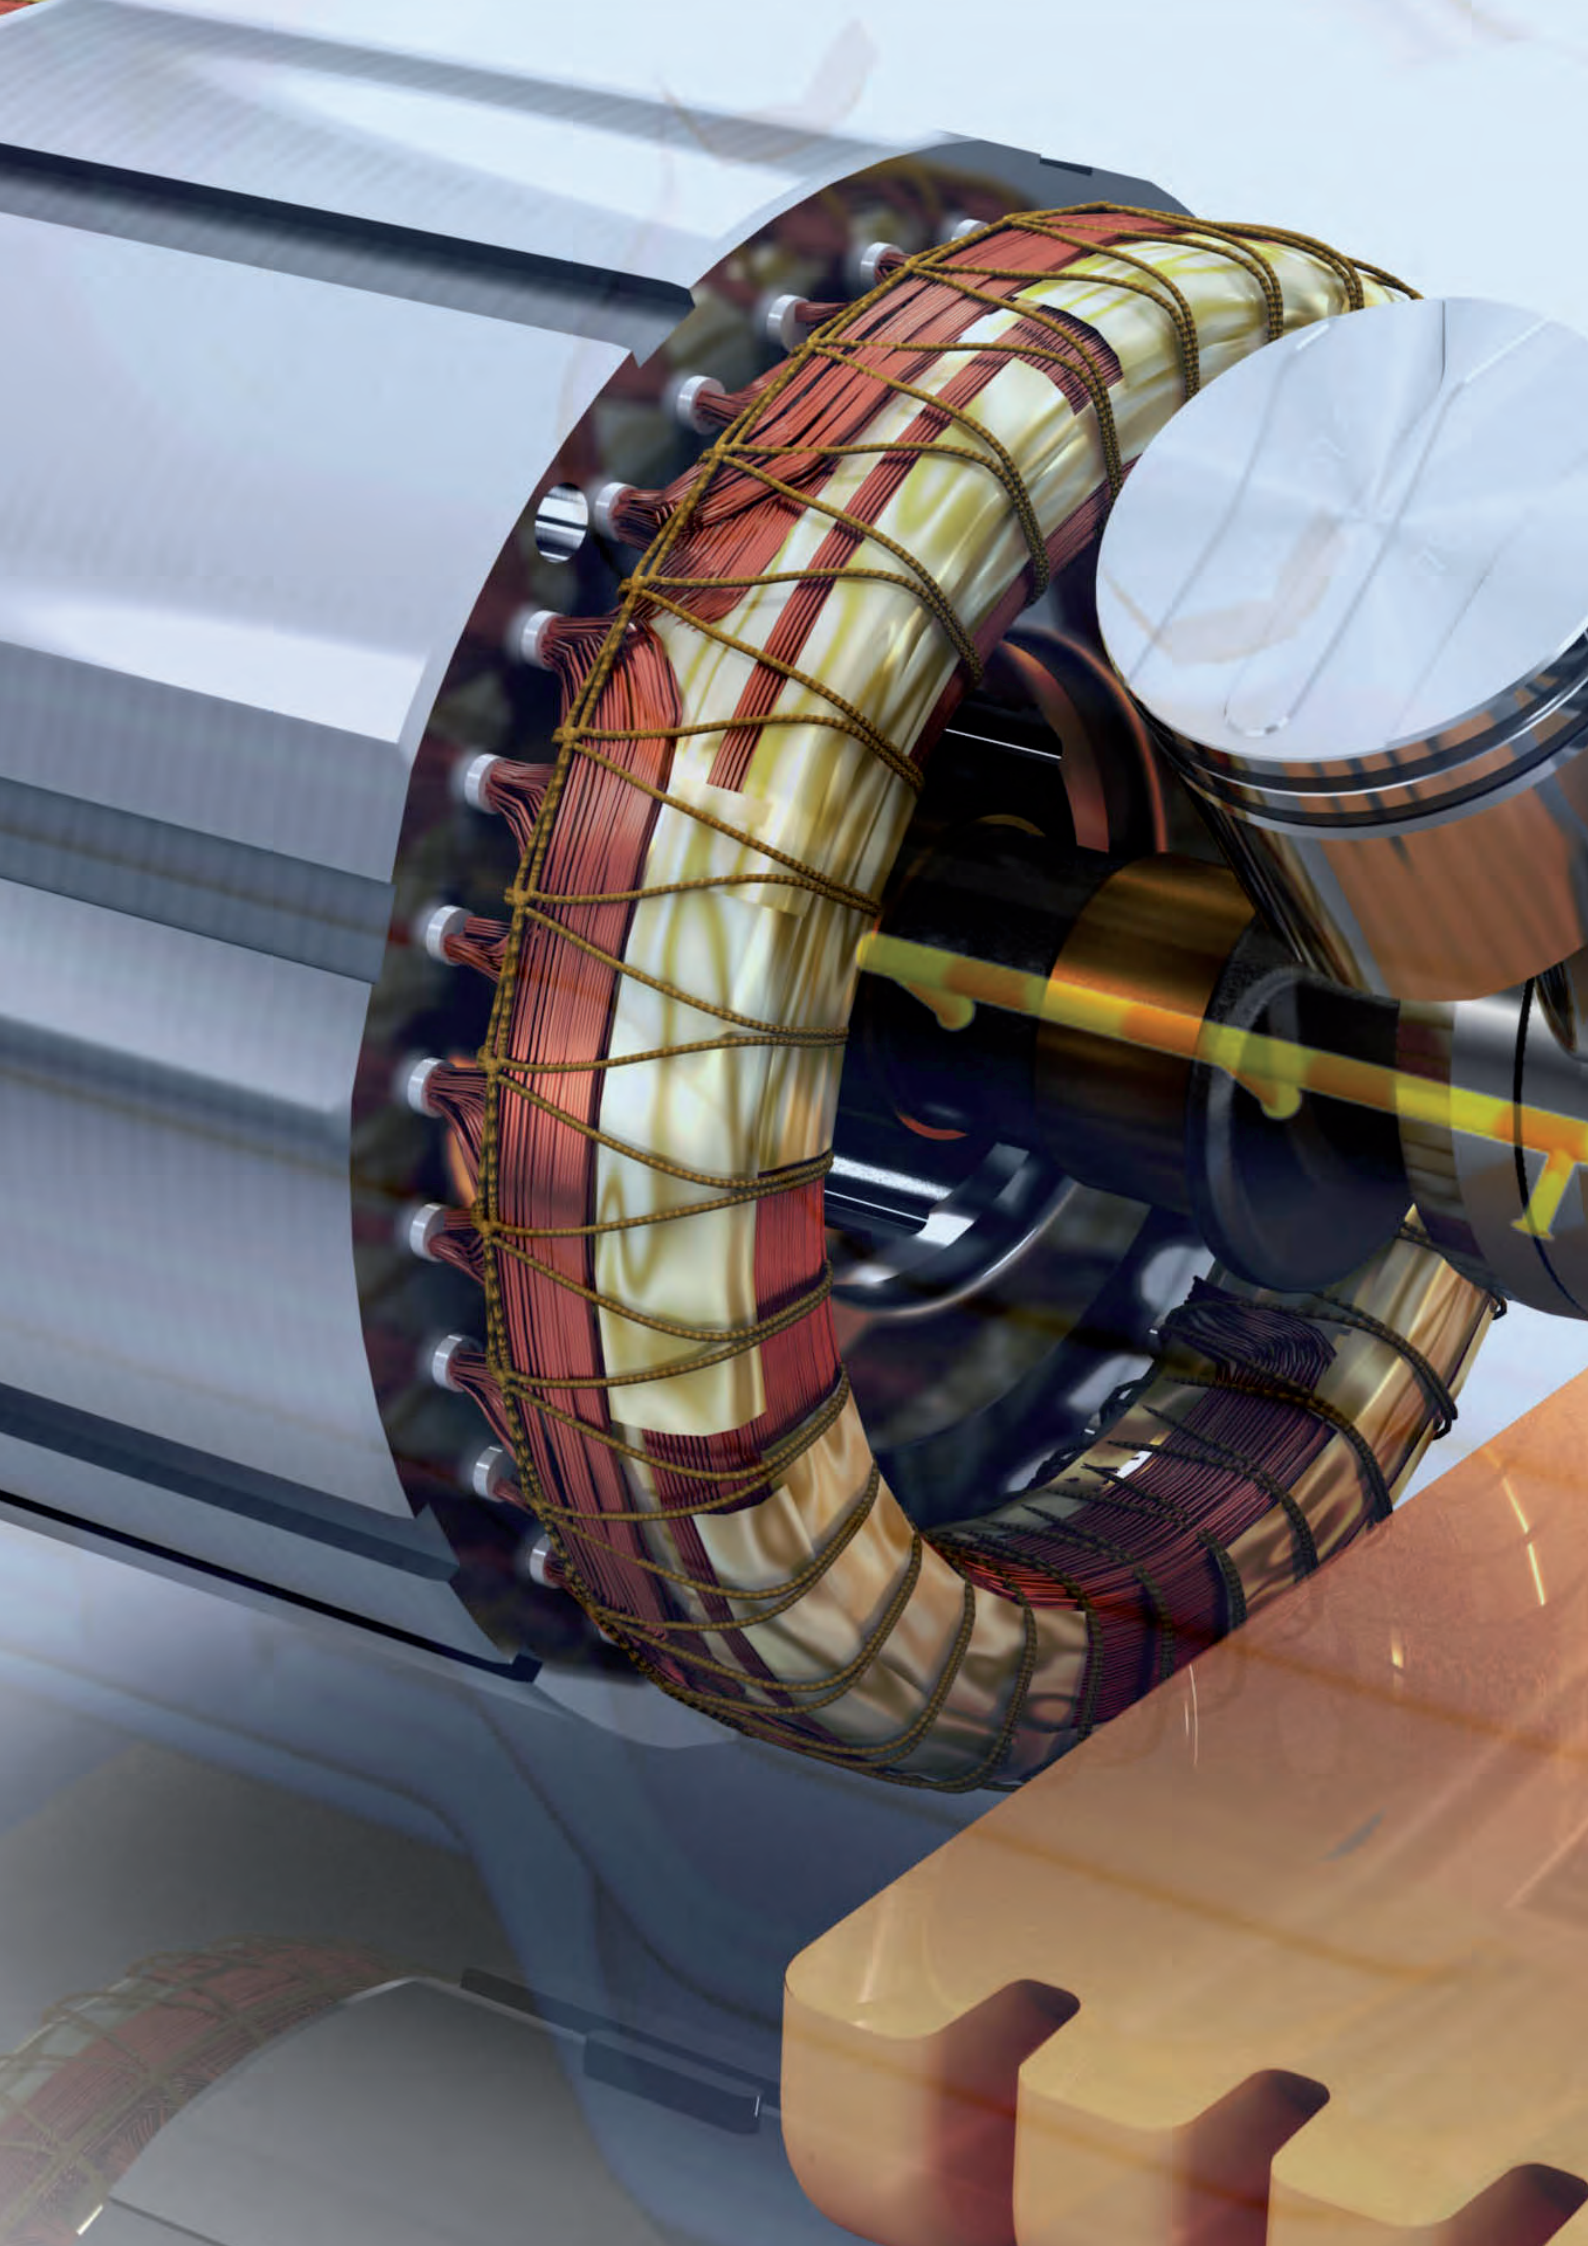
Bock vehicle compressors of the FK range are the result of many years of experience in the domain of mobile cooling systems.
The unsurpassed light, compact, robust design and wide r.p.m. range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors.
A wide variety of designs can be tailored to suit individual requirements.
The so-called K version is a special innovation with a unique valve plate system for maximum requirements in bus and coach air-conditioning systems.

- Compressors for bus and train air-conditioning
- Compressors for transport refrigeration and other applications

Open type compressors F

The F model series provides modern open type compressors for separate drive systems (using V belts or direct couplings). Load transfer through a V pair.
Virtually all drive capacity requirements can be met.
Very compact compressor design, robust and easy to handle. Oil pump lubrication as standard.

- Single-stage compressors
- NH_3 compressors
- Compressor units for direct drive
- NH_3 Compressor units for direct drive



The difference is in the detail - Characteristics of semi-hermetic Bock compressors

Special features

Universal

- e.g. R134a, R404A, R507, R407C, R22
  One compressor design for all standard refrigerants.
  For air-conditioning applications, normal refrigeration and deep-freezing
- Maximum allowed operating pressure (HP): 28 bar

High refrigeration capacity combined with minimum power requirement

- Optimized gas flow
- Efficient service valves
- Minimum clearance volume
- Powerful economic drive motors

Wide range of applications without additional cooling

Deep-freezing range with R404A, R507 also available with suction gas cooling (HG version)

Stable valve plate design

- Universally proven valve design with intake and discharge finger reed valves clamped on one side
- Valve made of high quality impact-resistant spring steel

Replaceable motors

The compressors can be repaired in the field as the drive motor can be exchanged.

Economic capacity control

- Cylinder cover incorporating a connection for capacity control
- Possible control stages:
  4 cylinder: 50 %
  6 cylinder: 33 % / 66 %
  8 cylinder: 25 % / 50 % / 75 %
- Continuously variable speed control (25 - 70 Hz) using an external frequency converter EFC/EFCe. See separate brochure "Bock semi-hermetic compressors - Electronic Controls".

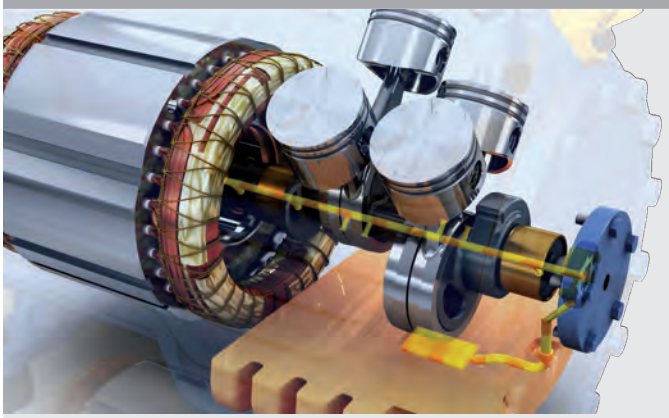
Minimum space requirement

Particularly low installation height and width

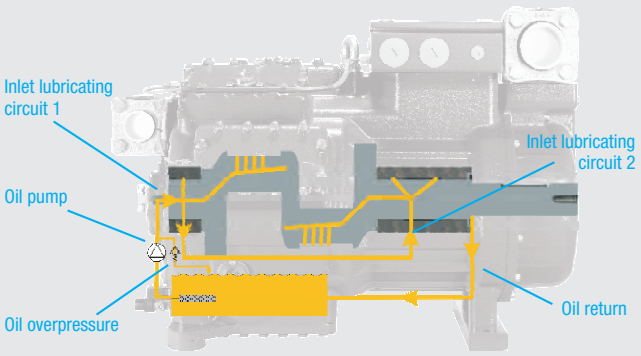
Quiet and low vibration

- Generously dimensioned crank mechanism
- Optimized mass balance
- Large volume pressure section for pulsation absorption
- 4 cylinder design from as little as 19 m³/h

Safe, reliable oil supply



- 4 and 6 cylinder with a conventional single circuit lubricating system
- Lubricating system incorporating an oil pump
- Large volume oil sump



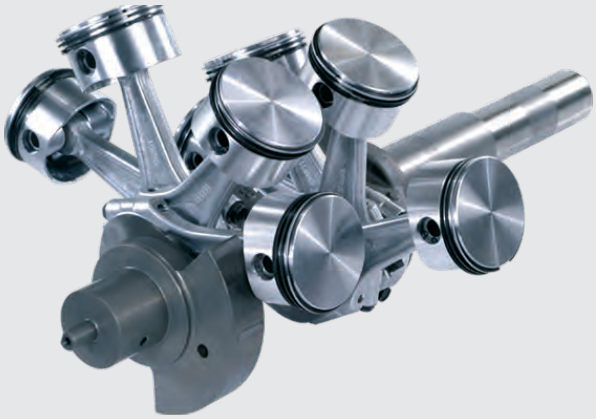
- 8 cylinder compressor with a dual circuit lubricating system (two oil circuits), each of the two main bearings supplied as the first lubrication point
- Oil pump lubrication independent of direction of rotation
- Connection possibility for oil pressure monitoring Δp-oil differential pressure sensor
- Large volume oil sump
- Direct coupling option for oil level regulator as standard

96215-02.2012-Gb ◦ Subject to change without notice

Special features

Wear-resistant durable driving gear

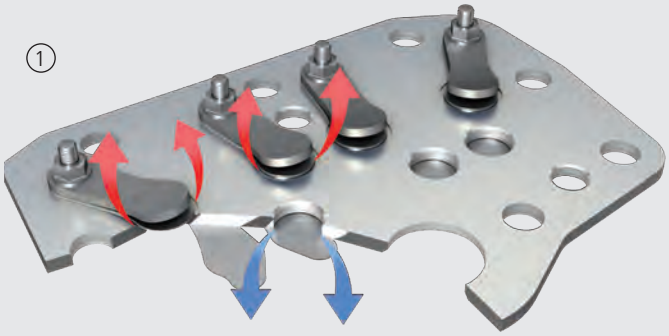
- 2 and 4 cylinder compressor HG(HA)12 to HG(HA)34
- Solid construction and design
- Low friction sleeve bearings
- Aluminium pistons with two ring assembly



- 4 and 6 and 8 cylinder compressor HG(HA)4 to HG8
- Solid construction and design
- Surface-hardened crankshaft
- Low friction sleeve bearings
- Aluminium pistons with triple ring assembly, hard-chromium plated sealing ring, HG(HA)4 with double ring assembly
- Aluminium connecting rod with high resistance piston bolt bearings starting HG(HA)5

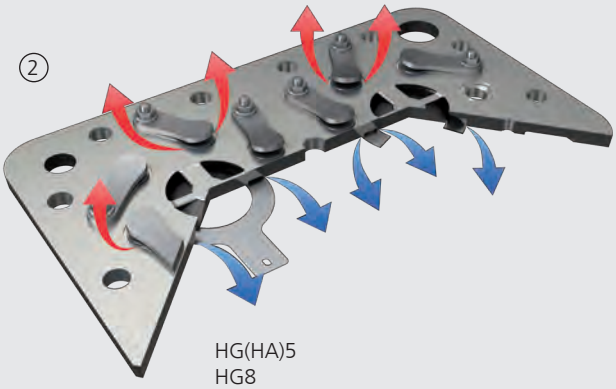
Solid construction and design

①



HG(HA)12-34
HG(HA)4

②



HG(HA)5
HG8

- Valve made of high quality impact-resistant spring steel
- Concentric reed valve on the suction side ② finger reed valve ①

Special features

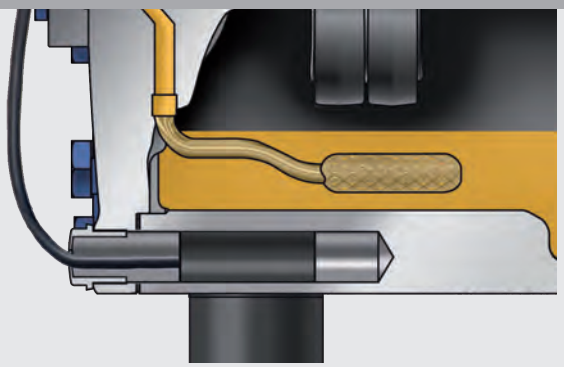
Variable suction line valve position (HG)

4 cylinder

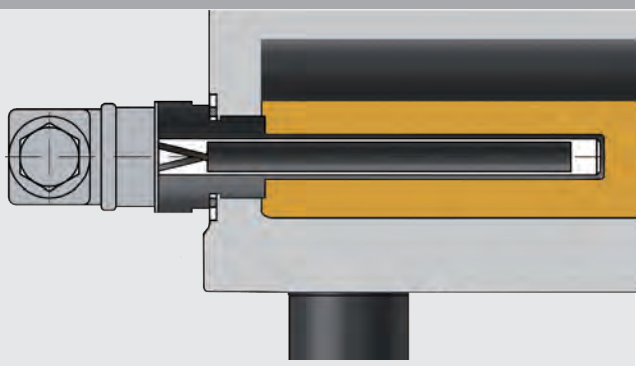
8 cylinder

- Shutoff valve rotates through 90° (2 and 4 cylinder) suction cover rotates through 90° (8 cylinder)
- Flexible location for suction line connection

Oil sump heater



- Optional in 2 and 4 cylinder compressors HG(HA)12 up to HG(HA)34
- PTC heater, self-regulating
- Replacement without opening the refrigeration circuit

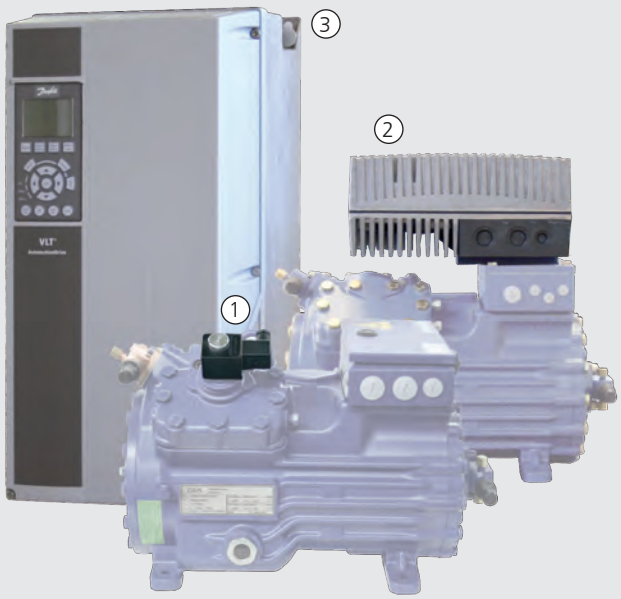


- Standard in 4 and 6 and 8 cylinder compressors HG(HA)4 up to HG8
- Immersion case design
- Replacement possible without opening the refrigerating circuit

96215-02.2012-Gb ◦ Subject to change without notice

Special features

Economic capacity control (option)



Via capacity regulator (1)

Cylinder cover incorporating a connection for capacity control

Possible control stages:

4 cylinder: 50 %,

6 cylinder: 33 % / 66 %,

8 cylinder: 25 % / 50 % / 75 %

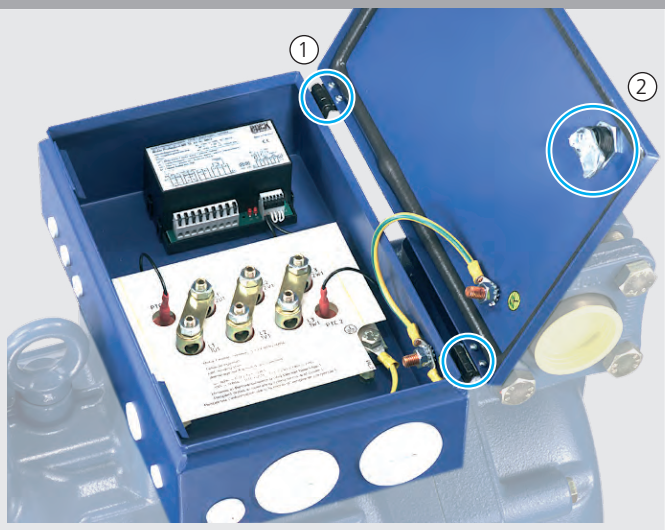
Via frequency converter

Continuously variable speed control using the Bock **EFC** / **EFCe** (**E**lectronic **F**requency **C**ontrol)

- Up to 25% less power consumption
- **EFC** (2) Continuously variable speed control directly mounted on the compressor HG(HA)12 to HG(HA)34
- **EFCe** (3) Continuously variable speed control for individual set-up HG4 to HG8, HA on request
- Further information see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Electric switch box

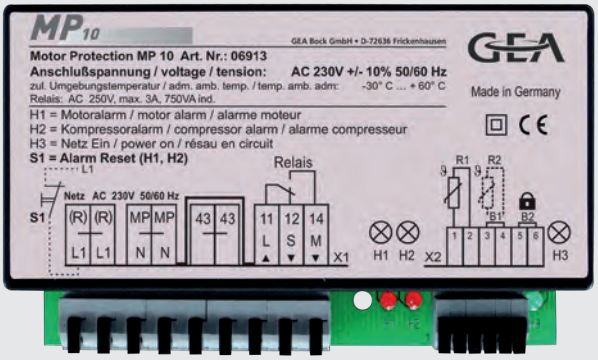
- Robust aluminium construction
- Easy electrical installation due to large internal volume
- Terminal block with cables in glass seal model
- Hinged and removable lifting cover (1) with a single quick fastener (2)
- Terminal strip for add-on components
- Protection system: IP66



- Easy electrical installation due to large internal volume
- Terminal block with cables in glass seal model
- Hinged lifting cover with a single quick fastener (6 cylinder), (1)
- Cover with simple snap closure (8 cylinder) (2)
- Insulation between terminal studs
- Inspection window for compressor monitoring (8 cylinder)
- Protection system: 4 cylinder IP65; 6 and 8 cylinder IP54

Special features

Bock MP10 Electronic Motor Protection



- Standard with all 2, 4 and 6 cylinder compressors
- Temperature monitoring with PTC sensors and optical status indicators
- Discharge gas temperature sensor (option)
- Further information see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Bock Compressor Management BCM2000

- Innovative and advanced compressor management system
- Standard with 8 cylinder compressors (optional for 4- and 6 cylinder compressors)
- Further information see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

96215-02.2012-Gb ◦ Subject to change without notice

Special features

Start unloader with the Bock ESS (option)

(**E**lectronic **S**oft **S**tart)

- Optional for HG22 and HG34
- Continuous compressor start-up to nominal speed
- No need for conventional start unloaders
- IP20 unit for installation in switch cabinet (supplied loose)
- Further information see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Single phase AC operation with Bock ESP (option)

(**E**lectronic **S**ingle **P**hase)

- Standard three phase AC compressor can be used on a single phase supply
- No start-up or operating condensers or relays required
- Unit designed for installation in switch cabinet
- Further information see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Forward looking compressor models

Bock offers a choice of interesting compressor versions in the established semi-hermetic range for current market trends such as alternative refrigerants, deep-freezing or EX protection.

Semi-hermetic compressors for all applications

HA Compressors (Hermetic Air-cooled)

air cooled semi-hermetic compressors for deep-freezing applications (R22/R404A), see page 27

Compressors for Special Refrigerants

HA System
Hermetic Air-cooled

Semi-hermetic air-cooled compressors for deep-freezing (R22/R404A)

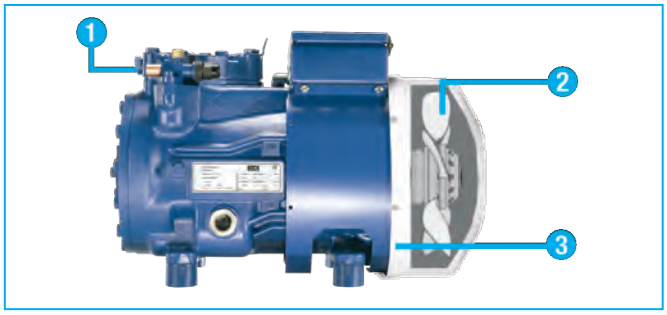
Available for all 2 and 4 cylinder versions.

Increasingly high specifications are being set for all suction gascooled semi-hermetic compressors for deep-freezing applications.

Compressors rapidly reach their temperature limits due to the rise in temperature of the suction gas caused by the drive motor. The refrigeration capacity also diminishes. But not in Bock HA compressors.

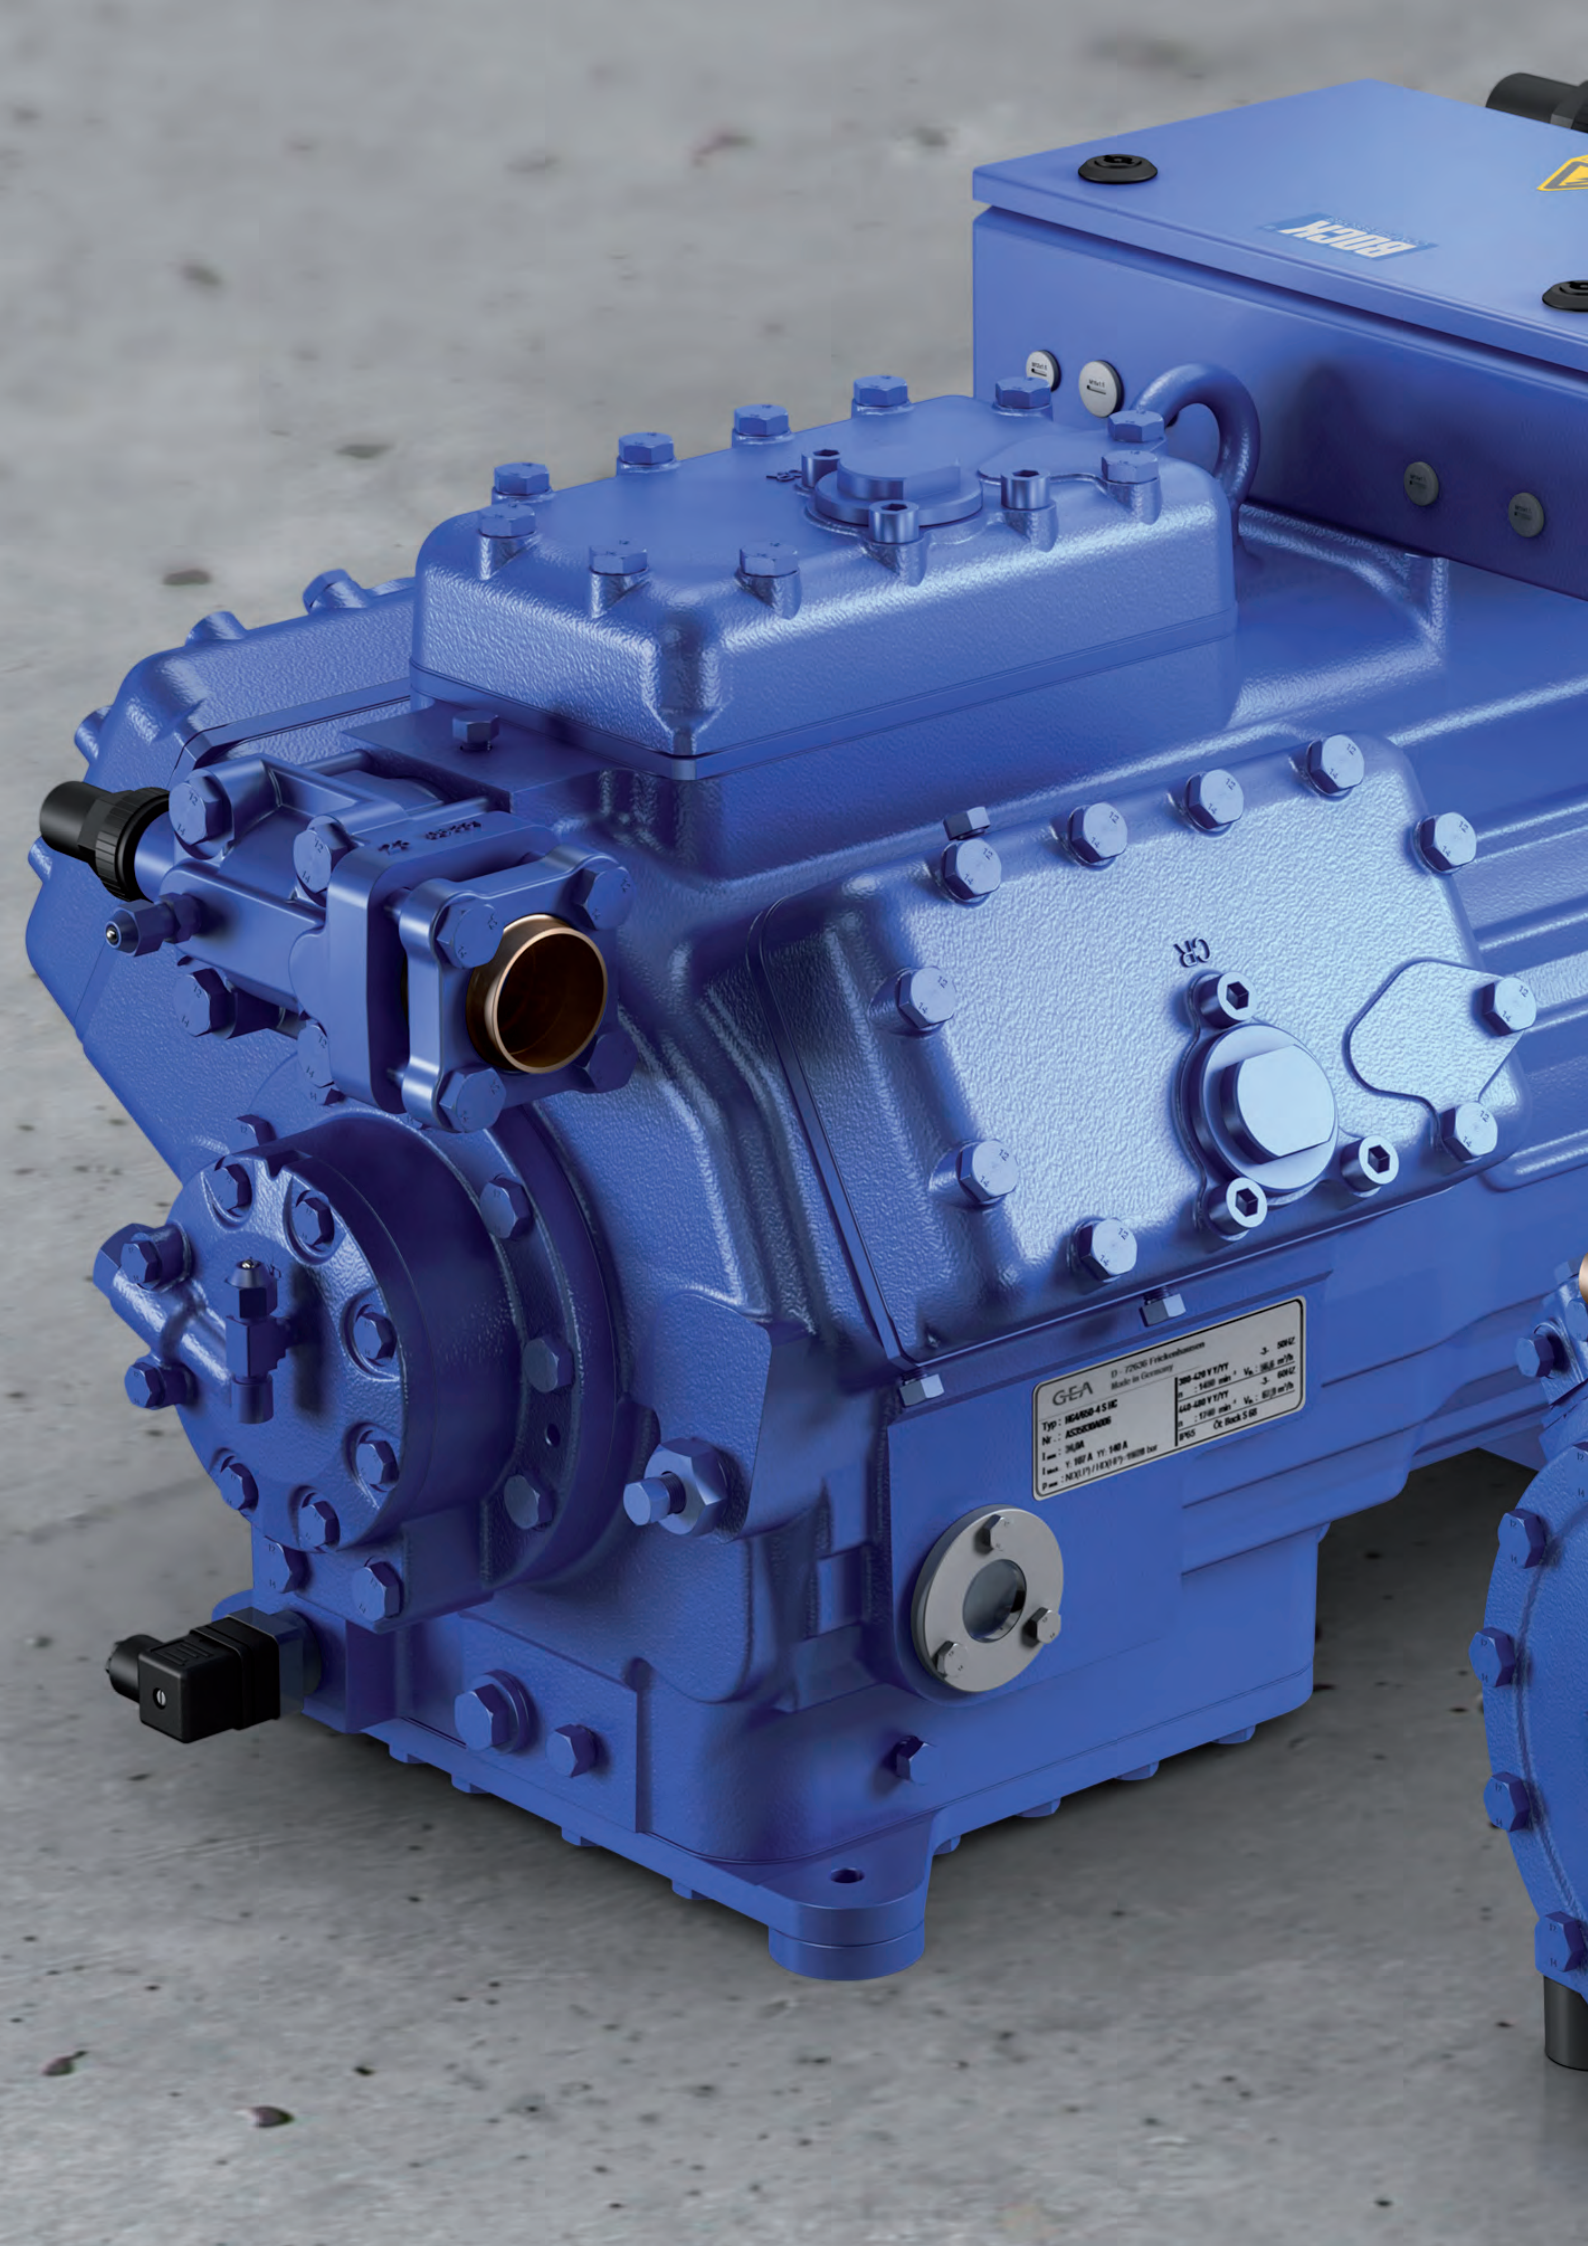
The unique "Bock HA principle" prevents this. The drive motor is air-cooled and compressor suction is direct. The suction gas is not heated by the motor, but is fed directly to the compressor without being diverted through the motor. The motor is cooled by a compact integrated ventilation unit. Its precise airflow cools not only the motor but also the compressor and especially the cylinder heads.

A semi-hermetic compressor with the advantages of an open type.

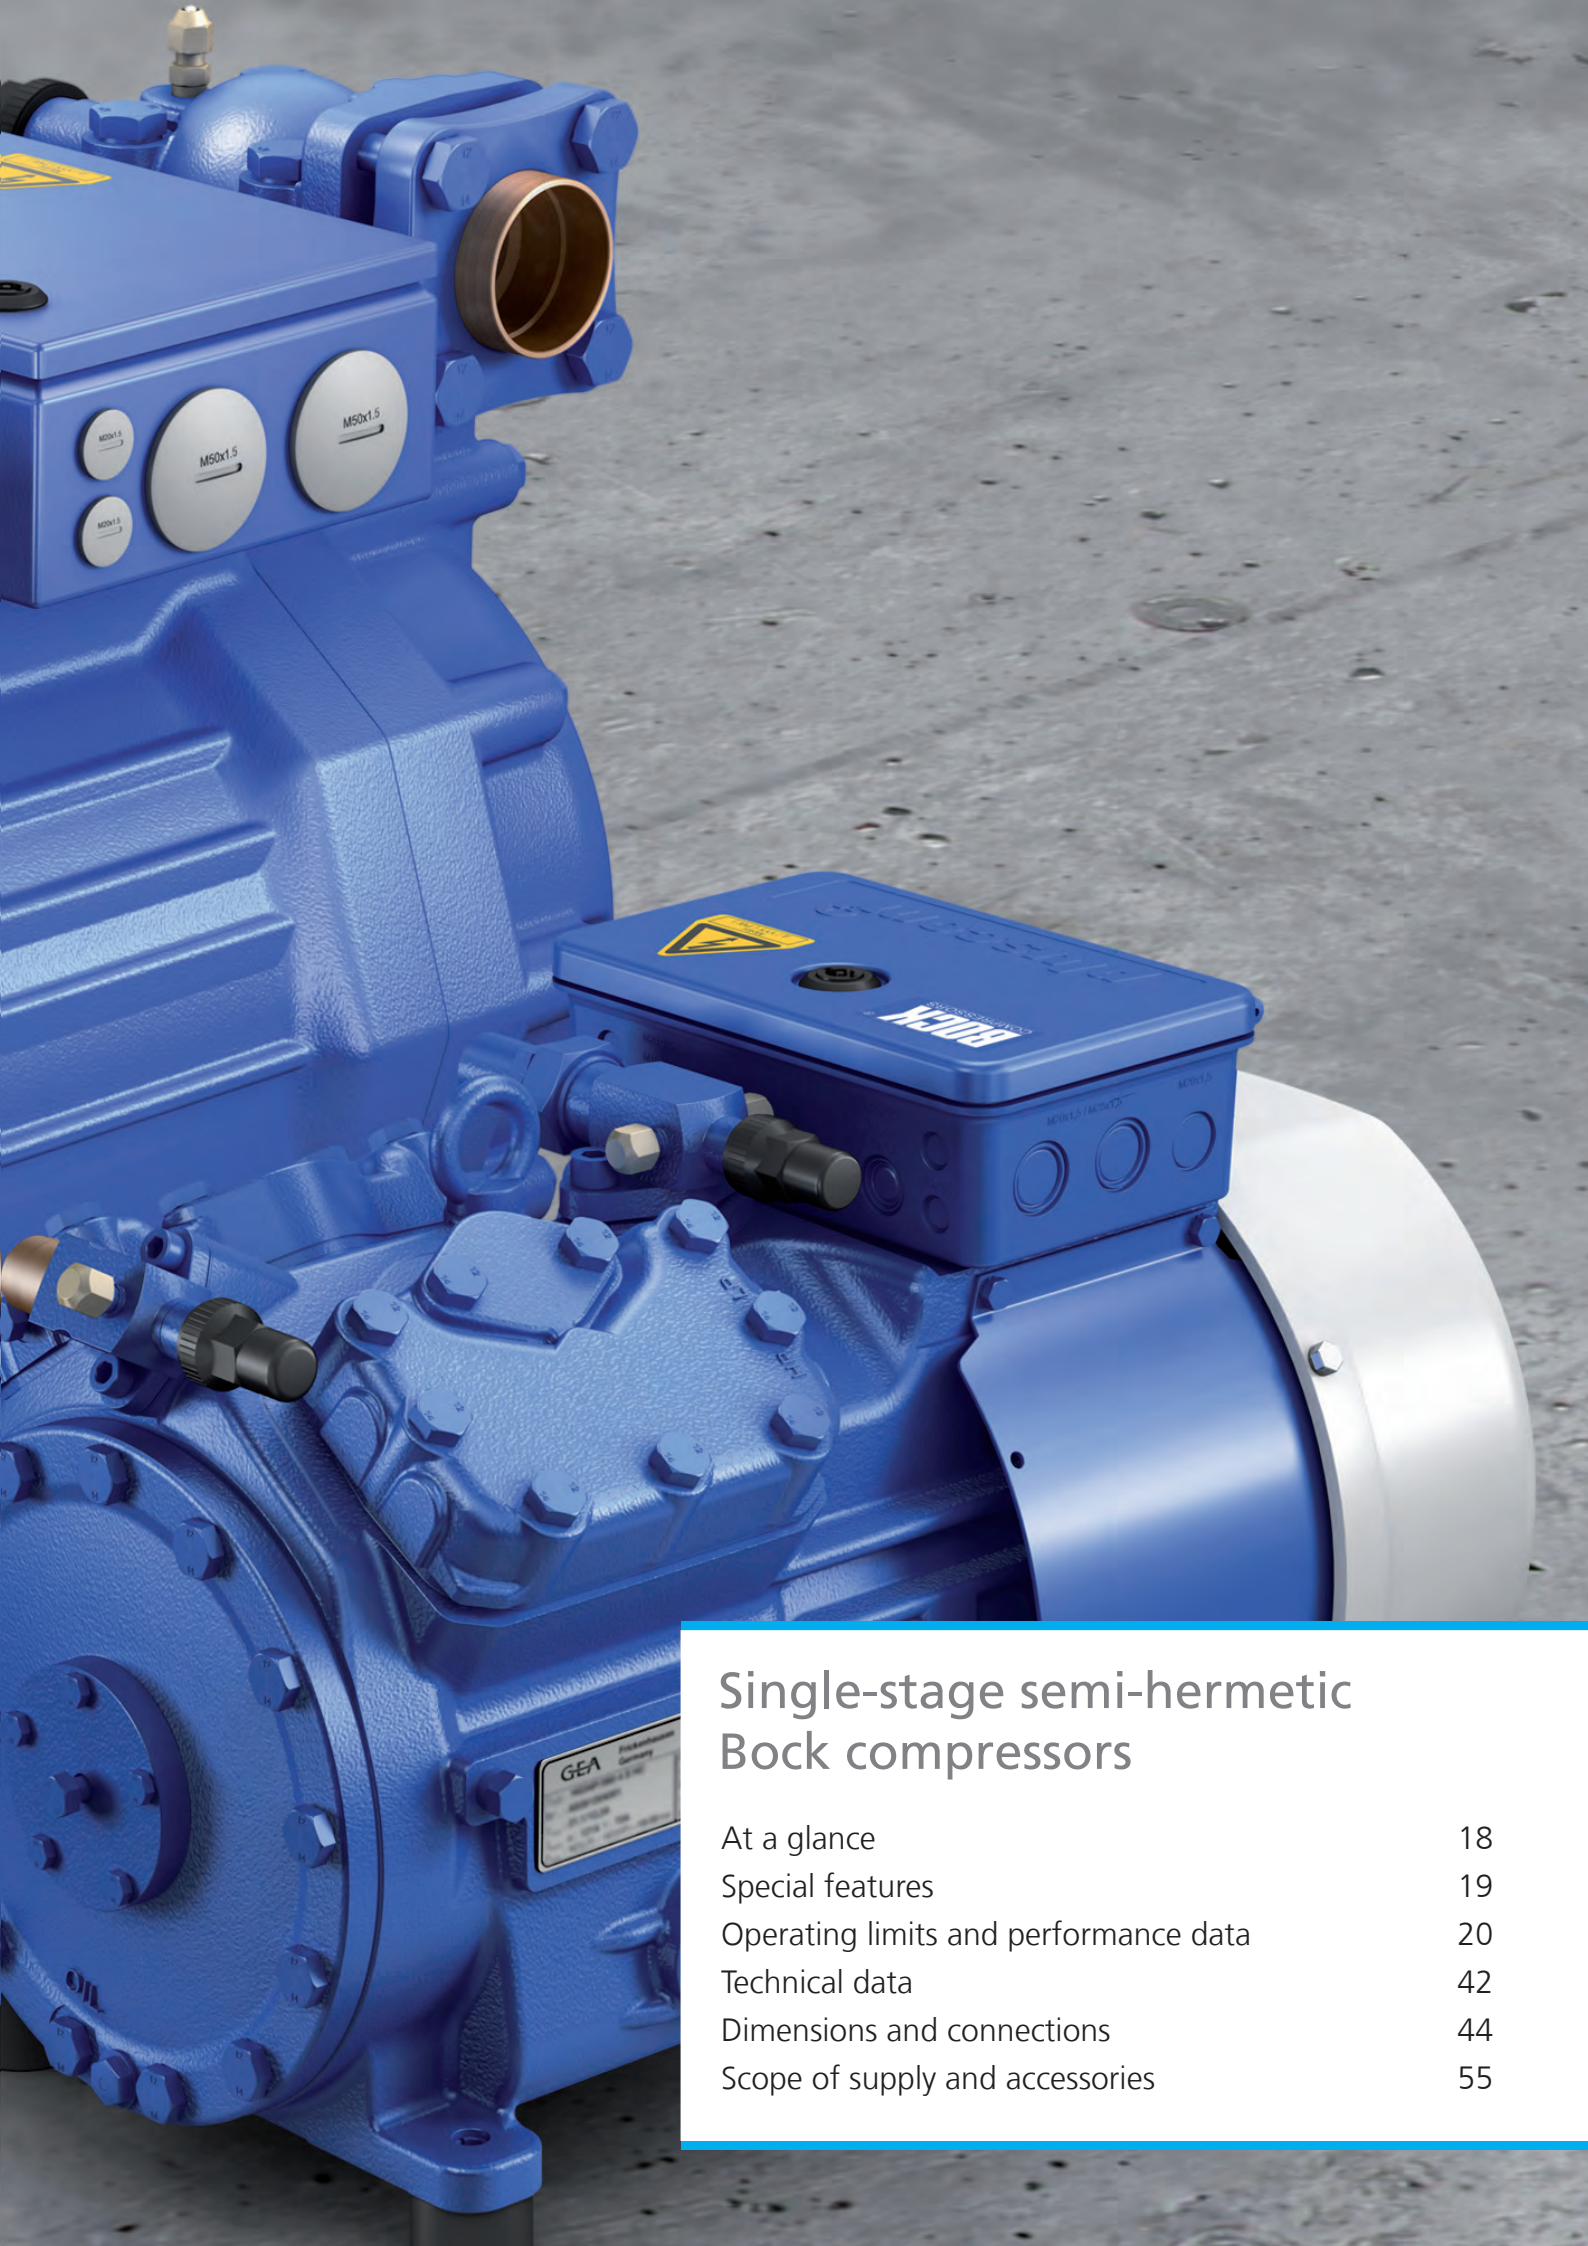


(1) Suction gas is fed directly into the compressor
(2) The motor is cooled by an integrated ventilation unit
(3) Cool air is directed over the motor through an air duct hood

This results in a reduced discharge gas temperature and therefore an extended range of applications combined with improved capacity (deep-freezing - e.g. R22, R404A). In addition, the compressor is separate from the motor, which is a particular advantage in the event of a motor burn-out.



GEA



Single-stage semi-hermetic Bock compressors

At a glance

The Bock semi-hermetic compressor program provides a full performance range of innovative and modern compressor designs in 2, 4, 6 and 8 cylinder constructions.
The ideal solution for any kind of application.

HG (Hermetic Gas-cooled)
Conventional suction gas-cooled compressor design

HA (Hermetic Air-cooled)
Special Bock design for deep-freezing (R22/R404A) with an air-cooled motor and direct suction at the cylinder.

All the compressors display the same particularly remarkable features:
- Outstanding running comfort
- High efficiency and reliability to the highest quality standard
- Easy maintenance, e.g. interchangeable motors
- Oil pump lubrication
- Bock MP10 electronic motor protection, especially easy to operate with LED status indicators
- Suitable for conventional and chlorine-free HFC refrigerants

Available versions:
The Bock semi-hermetic program provides the following product variants:
- Single-stage HG (HA) compressors
- Two-stage HGZ compressors
- Duplex DHG (DHA) compressors
- SHG (SHA) compressor units with receiver
- SHG (SHA) condenser units air-cooled

Forward looking compressor models
Bock offers a choice of interesting compressor versions in the established semi-hermetic range for current market trends such as alternative refrigerants, deep-freezing or EX protection.
- **HA** (**H**ermetic **A**ir-cooled), air-cooled compressors for deep-freezing applications
- **CO_2** Compressors (subcritical), for subcritical cascade systems
- **CO_2** Compressors (transcritical), for transcritical **CO_2** applications
- **R410A** Compressors, for the refrigerant R410A
- **ATEX** (**AT**mospheres **EX**plosibles), for explosion-risk environments

The current program
...8 model sizes with 26 capacity stages from 5,4 to 279,8 m³/h (50 Hz)

Special features

Type key

HGX34e / 215 - 4 S

- Motor variant [4]
- Number of poles
- Swept volume
- Series [3]
- Number of cylinders
- Size
- Ester oil filling [2]
- Series [1]

[1] HG = Hermetic Gas-Cooled (suction gas-cooled)
HA = Hermetic Air-Cooled (for deep-freezing)

[2] X = Ester oil filling
(HFC refrigerants e.g. R134a, R404A,R507, R407C)

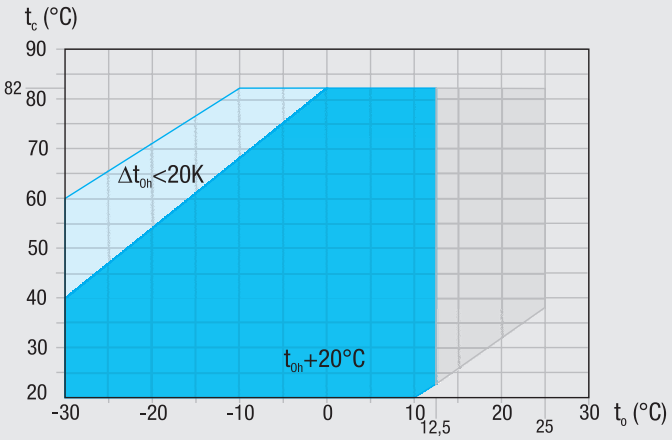
[3] e = Additional declaration for e-series compressors
P = Additional declaration for Pluscom compressors

[4] S = More powerful motor e.g. air-conditioning applications

Operating limits

R134a Operating limits

HGX12P / HGX22e / HGX34e
HGX4 / HGX5 / HGX6 / HGX7 / HGX8



Max. permissible operating pressure (LP/HP)[1]: 19/28 bar

Unlimited application range

Supplementary cooling or reduced suction gas temperature

Motor version -S- (more powerful motor)

t_o Evaporating temperature (°C)
t_c Condensing temperature (°C)
Δt_{Oh} Suction gas superheat (K)
t_{Oh} Suction gas temperature (°C)

[1] LP = low pressure HP = high pressure

R134a Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using the Bock EFC (Electronic Frequency Control). Further explanation see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Performance data

The performance data for R134a are based on ISO-DIS 9309 (DIN 8928) with a **50 Hz power supply frequency.** This signifies:
25 °C suction gas temperature without liquid subcooling.
For Pluscom compressors and HGX8/2470-4 operating at **50 Hz** already comply with EN 12900. **This signifies 20 °C suction gas temperature without liquid subcooling.**
This results in significant differences compared to specifications with liquid undercooling and/or suction-gas temperatures.
A comprehensive modification to 20 °C suction gas temperature will follow at a later date.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

ASERCOM certified performance data

CERTIFIED PRODUCT ASERCOM

For compressors with this label, the performance data are certified according to the strict requirements of ASERCOM.

ASERCOM is the Association of European Refrigeration Compressors and Controls Manufacturers.
Information about the Association and the constantly updated overview of certified Bock compressors can be found at www.asercom.org and www.bock.de.

t_c Condensing temperature (°C)
Δt_{Oh} Suction gas superheat (K)
t_{Oh} Suction gas temperature (°C)

R404A/R507 Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using the Bock EFC (Electronic Frequency Control).
Further explanation see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Performance data

The performance data for R404A/R507 are based on European Standard EN 12900 with a **50 Hz power supply frequency**.
This signifies: **20 °C suction gas temperature without liquid subcooling.**

This leads to significant differences compared to systems with liquid subcooling and/or other suction gas temperatures.

Performance data were compiled for R404A and R507.
The base values are the data for R404A.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

ASERCOM certified performance data

For compressors with this label, the performance data are certified according to the strict requirements of ASERCOM.

ASERCOM is the Association of European Refrigeration Compressors and Controls Manufacturers.
Information about the Association and the constantly updated overview of certified Bock compressors can be found at www.asercom.org and www.bock.de.

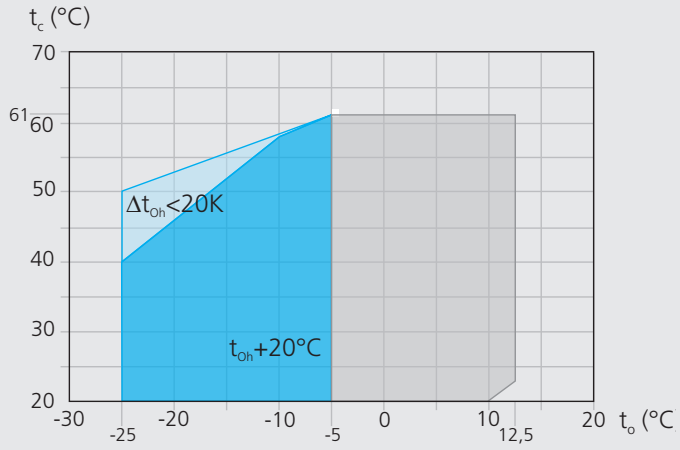
HGX4 / HGX5 / HGX6 / HGX7 / HGX8①



Unlimited application range

Supplementary cooling or reduced suction gas temperature

Motor version -S- (more powerful motor)

t_O	Evaporating temperature (°C)
t_C	Condensing temperature (°C)
Δt_{Oh}	Suction gas superheat (K)
t_{Oh}	Suction gas temperature (°C)

① **HGX8/2470-4 - HGX8/2830-4 - HGX8/3220-4**
Max. evaporating temperature t_O = 0 °C

Max. permissible operating pressure (LP/HP)[1]: 19/28 bar

[1] LP = low pressure HP = high pressure

R407C Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using the Bock EFC (Electronic Frequency Control). Further explanation see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Performance data

The performance data for R407C are based on ISO-DIS 9309 (DIN 8928) with a **50 Hz power supply frequency**.
This signifies: **25 °C suction gas temperature without liquid subcooling**. EN 12900 is already valid for Pluscom compressors, HGX4 and HGX8/2470-4 **operating at 50 Hz. 20 °C suction gas temperature without liquid subcooling**.
Evaporation and condensing temperatures are based on the dew point values (saturated vapour conditions).
A comprehensive modification to 20 °C suction gas temperature will follow at a later date.
This results in significant differences compared to specifications with liquid undercooling and/or suction-gas temperatures.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

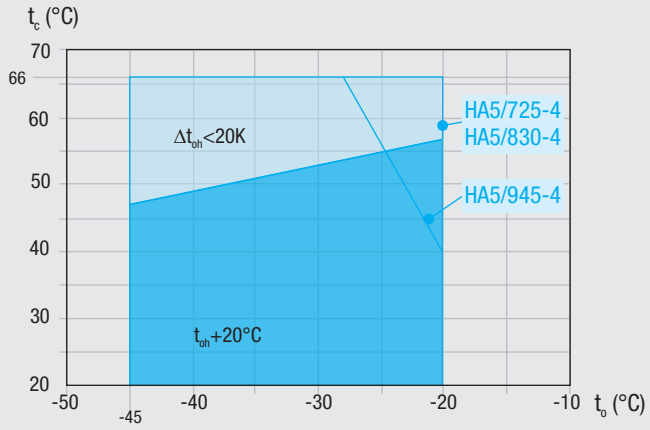
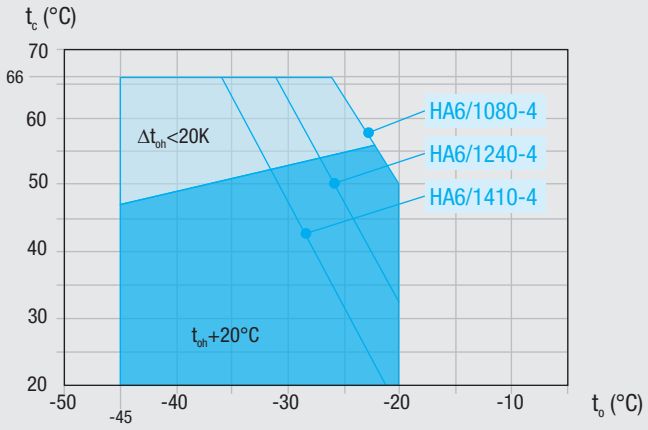
HA5



HA6



Max. permissible operating pressure (LP/HP)[1]: 19/28 bar

[1] LP = low pressure HP = high pressure

① **HG7 „Motor version -S-“**
in the evaporation range of t_0 = 5 °C bis 12,5 °C
limited condensing temperature up to t_C = 50 °C

② **HG8/2830-4**
max. evaporating temperature t_0 = 0 °C

HG8/2470-4 S
in the evaporation range of t_0 = 7 °C bis 12,5 °C
limited condensing temperature up to t_C = 55 °C

HG8/3220-4 S
max. evaporating temperature t_0 = 5 °C

Unlimited application range

-HG Supplementary cooling or red. suction gas temp.
-HA reduced suction gas temperature

Supplementary cooling and
reduced suction gas temperature

Motor version -S-
(more powerful motor)

t_O Evaporating temperature (°C)
t_C Condensing temperature (°C)
Δt_{Oh} Suction gas superheat (K)
t_{Oh} Suction gas temperature (°C)

R22 Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using the Bock EFC (Electronic Frequency Control). Further explanation see separate brochure "Bock semi-hermetic compressors - Electronic Controls".

Performance data

The performance data for R22 are based on ISO-DIS 9309 (DIN 8928) with a **50 Hz power supply frequency**.
This signifies: **25 °C suction gas temperature without liquid subcooling**. EN 12900 is already valid for Pluscom compressors and HG8/2470-4 **operating at 50 Hz. This signifies 20 °C suction gas temperature without liquid subcooling.**

This results in significant differences compared to specifications with liquid undercooling and/or suction-gas temperatures.
A comprehensive modification to 20 °C suction gas temperature will follow at a later date.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

* PW = Part Winding, motors for part winding start 1 = 1. part winding 2 = 2. part winding

Oil sump heater 110-240 V - 1 - 50/60 Hz (option)
HG(HA)12, HG(HA)22, HG(HA)34: 50-120 W
PTC heater, self-regulating, installation in housing bore

Oil sump heater 230 V - 1 - 50/60 Hz (standard)
- HG(HA)4: 80 W
- HG(HA)5, HG(HA)6, HG7: 140 W
- HG8: 200 W

Permanently set version, installation in immersion sleeve

Fan motors for the HA version 230 V - 1 - 50/60 Hz
- HA12P: 40 W / 0,3 A
- HA22P, HA34P: 72 W / 0,53 A
- HA4, HA5, HA6: 140 W / 0,71 A

Explanations:

① Tolerance (± 10%) relates to the mean value of the voltage range. Other voltages and current types on request.

② - The specifications for max. power consumption apply for 50Hz operation. For 60Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.
- Take account of the max. operating current / max. power consumption when designing contactors, leads and fuses. Switches: Service category AC3

③ 220-240 V Δ / 380-420 V Y - 3 - 50 Hz
265-290 V Δ / 440-480 V Y - 3 - 60 Hz

④ 380-420 V Y/YY - 3 - 50 Hz PW
440-480 V Y/YY - 3 - 60 Hz PW
PW = Part Winding, motors for part winding start
(no start unloaders required)
- Winding ratios: HG(HA)4, HG(HA)5, HG(HA)6 = 66% / 33%
- Designs for Y/Δ on request

⑤ 380-420 V Δ/ YYY - 3 - 50 Hz PW
440-480 V Δ/ YYY - 3 - 60 Hz PW
PW = Part Winding, motors for part winding start
(no start unloaders required)
- Winding ratios: HG7, HG8 = 60% / 40%
- Designs for Y/Δ on request

⑥ For soldering connections

Two-stage semi-hermetic Bock compressors

A two-stage variant based on the Bock HG semi-hermetic 6 cylinder range is available for extended use in the domain of deep-freezing.

The two stage system consists of:
- Liquid subcooler
- Reinjection valve
- Solenoid valve
- Sight glass
- Filter drier

Special features:

- 6 cylinder design
- LP/HP stage ratio 2:1
- 2 stage operation with liquid subcooler
- Reinjection valve adapted to refrigerant and application
- Extremely reliable and economic compressor design

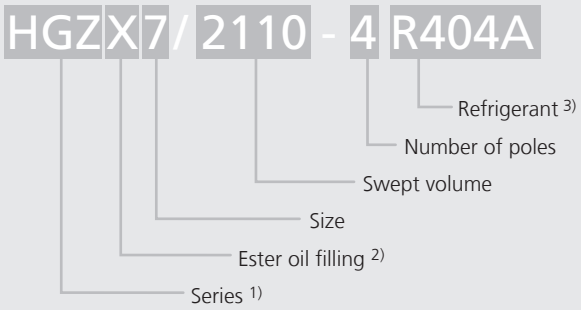
Further information on the HG7 basic compressor see chapter "Single-stage semi-hermetic Bock compressors" from page 18.

Available models

for refrigerants R404A, R410A, R507, R22

Type	Displacement (50 Hz) LP / HP
HGZX7/1620-4 R404A/R507 HGZX7/1620-4 R410A HGZ7/1620-4 R22	93,70 m³/h / 46,90 m³/h
HGZX7/1860-4 R404A/R507 HGZX7/1860-4 R410A HGZ7/1860-4 R22	107,60 m³/h / 53,80 m³/h
HGZX7/2110-4 R404A/R507 HGZX7/2110-4 R410A HGZ7/2110-4 R22	122,40 m³/h / 61,20 m³/h

Type key

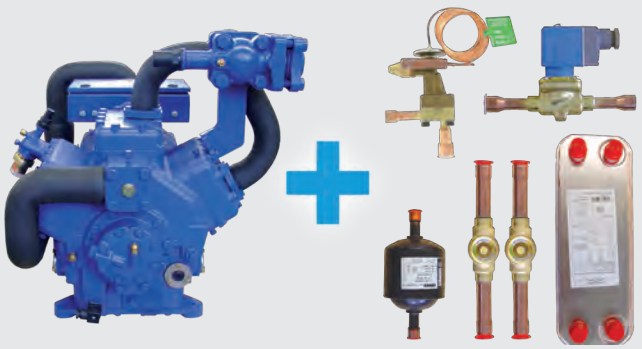


1) HGZ = Hermetic Gas-Cooled (suction gas-cooled), two-stage
2) X = Ester oil filling (HFC refrigerants R404A,R410A)
3) Possible refrigerants are R404A, R410A, R22

The two possible designs of the HGZ7:

Standard

Medium-pressure mixed line mounted on the compressor and insulated, liquid subcooler, expansion valve, solenoid valve, two sight glasses, filter drier everything enclosed separately for individual, external mounting



Option

Liquid subcooler, expansion valve, solenoid valve, two sight glasses, filter dryer mounted directly to the compressor, lined and insulated

4 Intermediate pressure line MP
5 Cylinder HP-stage
6 Subcooler*
7 Reinjection valve*
8 Sight glass 1*
9 Sight glass 2*
10 Solenoid valve*
11 Filter drier*
12 Vibration damper, pressure line
13 Oil separator
14 Non-return valve
15 Condenser
16 Refrigerant receiver
17 Filter drier
18 Solenoid valve
19 Sight glass
20 Expansion valve (evaporator)
21 Evaporator
22 Liquid separator
23 Vibration damper, suction line
24 Filter suction line

LP = Low pressure
MP = Medium pressure
HP = High pressure
FUE = Liquid subcooler, inlet
FUA = Liquid subcooler, outlet

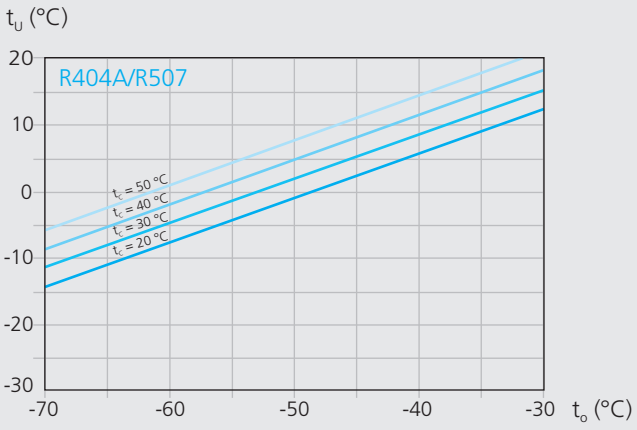
* Components for subcooling system as standard

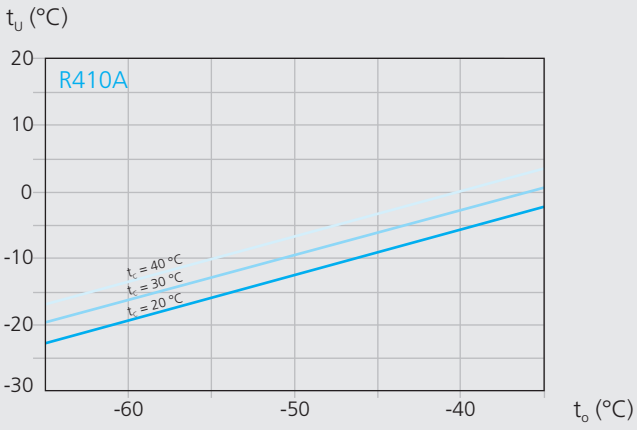
Operating limits

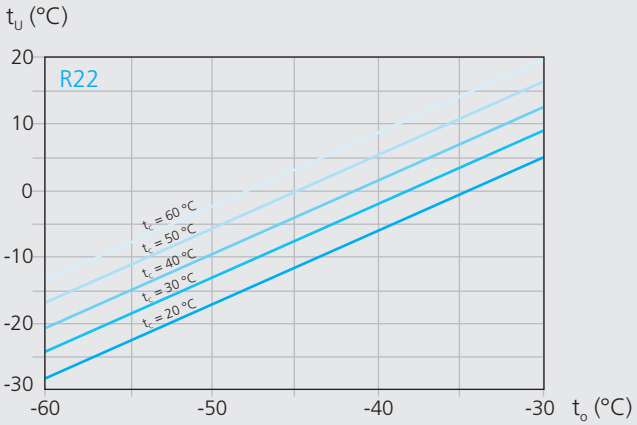
Subcooling temperature

The design of the expansion valve on the compressor can be defined with the help of the diagram by approximately calculating the subcooling temperature arising in the relevant operating conditions (to/tc).

Subcooling temperature calculation diagram for the intermediate cooler outlet







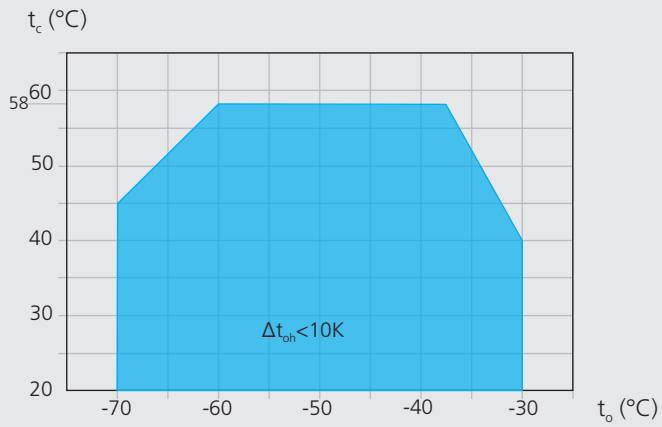
t_U = Subcooling temperature at the intermediate cooler outlet (FUA)

t_O = Evaporation temperature

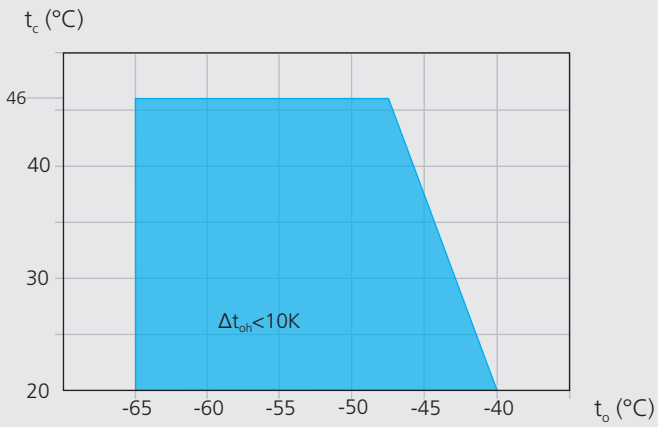
96215-02.2012-Gb ◦ Subject to change without notice

Operating limits

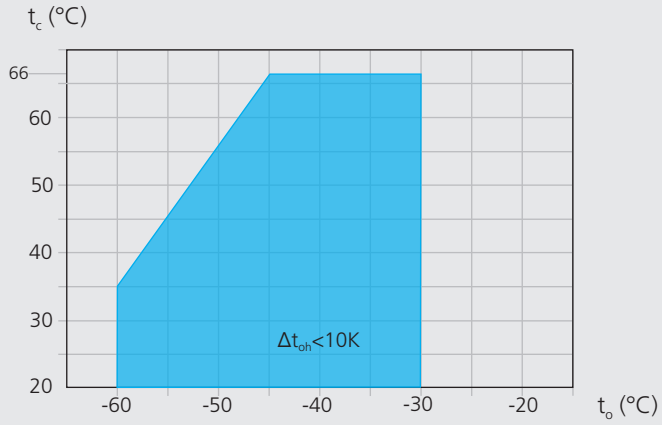
R404A/R507



R410A



R22



Application range

t_O Evaporating temperature (°C)
t_C Condensing temperature (°C)
Δt_{Oh} Suction gas superheat (K)

Max. permissible operating pressure (LP/MP/HP)[1]: 19/19/28 bar

[1] LP = low pressure MP = meduim pressure HP = high pressure

Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Performance data

The stated performance values are based on **10 K suction gas superheat with liquid subcooling, operating at 50 Hz.**

Performance data were compiled for R404A and R507.
The base values are the data for R404A.

Conversion factor für 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software

* PW = Part Winding, motors for part winding start 1 = 1. part winding 2 = 2. part winding

LP = low pressure
HP = high pressure

Oil sump heater 230V -1- 50/60 Hz 140 W
Permanently set version, installation in immersion sleeve

Explanations:

① Tolerance (± 10%) relates to the mean value of the voltage range. Other voltages and current types on request.

② - The specifications for max. power consumption apply for 50 Hz operation. For 60 Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.
- Take account of the max. operating current / max. power consumption when designing contactors, leads and fuses. Switches: Service category AC3

③ 380-420 V Δ/ YYY - 3 - 50 Hz PW
440-480 V Δ/ YYY - 3 - 60 Hz PW
PW = Part Winding, motors for part winding start (no start unloaders required)
Winding ratios: 60% / 40%

Service - Made by GEA Bock

Because you're never done learning - GEA Bock training and workshops on compressors

Many years ago, GEA Bock intensified its commitment in the area of customer training.
And so we offer a comprehensive array of attractive training events, from two-day practitioners' workshops in Frickenhausen to afterwork workshops throughout Germany. Regardless of the type of training you are interested in.

Three things are characteristic of all GEA Bock training:
- The captivating way that the training director Peter Spies carries out the events
- The strong practice orientation of the training events, and
- The fact that all training events from, GEA Bock are offered as a free service

Current training dates can be found online at www.bock.de

Overview of training events offered:

- GEA Bock Practitioners' Workshop
- Training tailored to your individual needs
- Training for your entire staff
- Training on your premises

For additional questions or advice, please contact our training director:

Peter Spies

Quality by GEA Bock - The benchmark in cooling and air-conditioning

The name GEA Bock stands worldwide for compressor technology with the highest level of quality.

The goal of quality leadership in all product areas has always been at the centre of our company philosophy in our over 75-year history.

Today, permanent optimisation of quality, not just on the product but in all areas, is the core of GEA Bock's company strategy.

GEA Bock meets the requirements of DIN EN ISO 9001:2008, certified through DQS, as well as numerous additional European and globally recognised standards.

In addition, GEA ock maintains a system of internal company standards, which go well beyond public regulations in many points.
