Notes regarding the instructions

Symbols

Danger

This symbol indicates dangers to life and health of persons due to the flammable substance R454C.

Warning of electrical voltage

This symbol indicates dangers to the life and health of persons due to electrical voltage.

Warning

This signal word indicates a hazard with an average risk level which, if not avoided, can result in serious injury or death.

Caution

This signal word indicates a hazard with a low risk level which, if not avoided, can result in minor or moderate injury.

Note

This signal word indicates important information (e.g. material damage), but does not indicate hazards.

Info

Information marked with this symbol helps you to carry out your tasks quickly and safely.

Follow the manual

Information marked with this symbol indicates that the instructions must be observed.

You can download the current version of the instructions and the EU declaration of conformity via the following link:

TTK 800

<https://hub.trotec.com/?id=42519>

Safety

Read this manual carefully before starting or using the device. Always store the manual in the immediate vicinity of the device or its site of use!

Warning

Read all safety warnings and all instructions.

Failure to follow the warnings and instructions may result in electric shock, fire and / or serious injury.

Save all warnings and instructions for future reference.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.

Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

- Do not use the device in potentially explosive rooms or areas.
- Do not use the device in aggressive atmosphere.
- Set the device up in an upright and stable position.
- Let the device dry out after a wet clean. Do not operate it when wet.
- Do not use the device with wet or damp hands.
- Do not expose the device to directly squirting water.
- Never insert any objects or limbs into the device and never use it as source of ignition.
- Do not cover or transport the device during operation.
- Do not sit on the device.
- This appliance is not a toy! Keep away from children and animals. Do not leave the device unattended during operation.

- Check accessories and connection parts for possible damage prior to every use of the device. Do not use any defective devices or device parts.
- Ensure that all electric cables outside of the device are protected from damage (e.g. caused by animals). Never use the device if electric cables or the power connection are damaged!
- The electrical connection must correspond to the specifications in chapter Technical data.
- Insert the mains plug into a properly secured mains socket.
- Observe the device's power input, cable length and intended use when selecting extensions to the power cable. Completely unroll extension cables. Avoid electrical overload.
- Before carrying out maintenance, care or repair work on the device, remove the mains plug from the mains socket. Hold onto the mains plug while doing so.
- Switch the device off and disconnect the power cable from the mains socket when the device is not in use.
- Do not under any circumstances use the device if you detect damages on the mains plug or power cable. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
Defective power cables pose a serious health risk!
- When positioning the device, observe the minimum distances from walls and other objects as well as the storage and operating conditions specified in the Technical data chapter.
- Make sure that the air inlet and outlet are not obstructed.
- Make sure that the suction side is kept free of dirt and loose objects.
- Do not remove any safety signs, stickers or labels from the device. Keep all safety signs, stickers and labels in legible condition.
- Only transport the device in an upright position with an emptied condensation tank or drain hose.
- Discharge the collected condensate before transport and storage. Do not drink it. Health hazard!
- Only install the device in compliance with the national installation regulations.
- Observe the national gas regulations.
- Only install, operate and store the device TTK 800 in a room measuring more than 4 m².
- Store the device in a way that no mechanical damage can occur.
- Please note that the connected ducts must not contain any sources of ignition.
- R454C comes with a low GWP factor (Global Warning Potential) of 146 and an ODP (ozone depletion potential) of 0.
- Observe the maximum refrigerant capacity in the technical data.
- Do not drill through or burn.
- Do not use any means other than those recommended by the manufacturer for accelerating the defrosting process.
- Every person working with or at the refrigerant circuit must be able to provide a certificate of qualification issued by a body accredited by the industry, demonstrating their competence in the safe use of refrigerants based on a procedure well-known in the industry.
- Service work may only be carried out in accordance with the manufacturer's specifications. If maintenance and repair work require the support of additional persons, the person trained in handling flammable refrigerants shall continuously supervise the work carried out.
- Unventilated rooms, in which the device is installed, operated or stored, must be built in a way to ensure that potentially leaking refrigerant cannot accumulate. This serves to avoid fire or explosion hazards resulting from an ignition of the refrigerant by an electric furnace, cooking stove or another ignition source.
- The entire refrigerant circuit is a maintenance-free, hermetically sealed system and may only be maintained or repaired by specialist companies for cooling and air-conditioning or by Trotec.

Intended use

Only use the device as mobile construction dryer for drying and dehumidifying room air (e.g. after water damages from burst pipes or flooding) whilst adhering to the technical data. The construction dryer can be used at low temperatures of about 5 °C.

Intended use comprises:

- drying and dehumidifying:
 - production plants, underground rooms
 - store rooms, archives, laboratories
 - rooms and areas after water damages from burst pipes or flooding

Safety warnings for devices containing flammable refrigerants

- Only position the device in rooms where potentially leaking refrigerant cannot accumulate.
- Only position the device in rooms where there is no source of ignition (e.g. open flames, an active gas appliance or an electric heater).
- Please note that the refrigerant is odourless.

- maintaining the dryness of:
 - instruments, devices, files
 - electric control devices, boiler plants, turbines and pipe systems in power plants
 - moisture-sensitive loads etc.

Improper use

- Do not place the device on wet or flooded ground.
- Do not place any objects, e.g. clothing, on the device.
- Do not use the device outdoors.
- Any unauthorised modifications, alterations or structural changes to the device are forbidden.
- Any operation other than as described in this manual is prohibited. Non-observance renders all claims for liability and guarantee null and void.

Personnel qualifications

People who use this device must:

- be aware of the dangers that occur when working with electric devices in damp areas.
- have read and understood the instructions, especially the Safety chapter.

Maintenance tasks which require the housing to be opened must only be carried out by specialist companies for cooling and air-conditioning or by Trotec.

Safety signs and labels on the device

Note

Do not remove any safety signs, stickers or labels from the device. Keep all safety signs, stickers and labels in legible condition.

The following safety signs and labels are attached to the device:
The following label is attached to the device in German, English and French.

Operating manual

1. The dehumidifier is designed for 220 – 240 V / 50 Hz single-phase current with earth connector. 16 A fuse.
2. If cable drums etc. are used, they always have to be completely unrolled during operation! When connecting several dehumidifiers to a cable drum, always observe total power and fusing specifications!
3. Electrical connections:
brown = live, blue = neutral, green/yellow = earth
The dehumidifier must only be operated with ground connection!
4. The device must be positioned in a way that the air inlet and outlet grids are not being blocked.

5. The condensate can be permanently discharged from the dehumidifier via the hose connection. To do so, the condensate discharge line must be laid with a continuous decline all the way to the drain.

Alternatively, you can set up a water collection container next to the device. Due to the high dehumidification performance, we recommend using a container with a volume of at least 90 litres. Once the water collection container is full, the dehumidifier does not switch off automatically. For this reason, always make sure to empty the container in time.

If you use a separate water collection container, cut the condensation drain hose connected to the dehumidifier right below the upper part of the container (or above the maximum water level inside the container). If the hose end is positioned below the water level in the collection container, it may affect the condensate discharging properly from the dehumidifier, which will lead to water leaking out uncontrollably from the dehumidifier.

See operating manual when operating with integrated condensate pump.

6. Room temperatures below approx. 18 °C may cause the (extensive) formation of ice at the dehumidifier's cooling element (air intake side). The ice will quickly defrost automatically and regularly. The fan in the dehumidifier switches off during the defrosting process. The defrosting time depends on the temperature.

7. After switching the dehumidifier off, wait at least 5 minutes until switching it on again. Otherwise damages on the device may occur.

8. Cleaning: In order to guarantee a high dehumidification performance, clean the device regularly. Always disconnect the mains plug prior to cleaning! Clean the cooling grids of the dehumidifier's air inlet every 4-6 weeks depending on their degree of contamination (see instructions).

The connection of the condensate discharge and the attached condensation hose should be disconnected after each use. In addition, they should be cleaned with compressed air in the opposite direction of the water current direction. Otherwise, contaminations and blockage may occur inside the condensate discharge line, and water may uncontrollably leak out of the lower part of the dehumidifier.

It is best to use air filters which also have to be cleaned with compressed air and/or water on a regular basis, depending on their degree of contamination.

Note 1 for operation: Optimal room temperatures

At room temperatures below 12 °C, the room should be heated in order to optimise energy efficiency and to reduce drying periods. For this purpose, preferably use an electric heater. Do not under any circumstances use direct oil or gas heaters (devices without flue pipe connection) as these release large amounts of water vapour into the room air. This will extremely extend the drying periods and increase energy costs. The ideal

operating temperature for efficient drying is between 15 – 25 °C. In order to carry out a proper dehumidification process and to optimise flowrates, position the electric heater as far away from the dryer as possible.

Note 2 for operation: Air distribution with fans

If the areas to be dehumidified are in several different rooms, we recommend using one fan per room in rooms where no dehumidifier has been set up. This will significantly reduce the drying period. Always keep the doors between the individual rooms open. Otherwise, a dehumidifier has to be installed in each room. All windows and exterior doors must be shut during the drying process!

Note! Transport and storage: The device can be transported and stored in vertical and horizontal position. Operation must only be carried out in a suitable position (30°)! (see icons).

Other operating settings will lead to a complete device failure!

TTK 800

WARNING • WARNUNG • ATTENTION

- DE** Das Gerät muss in einem Raum mit einer Grundfläche größer als 4 m² aufgestellt, betrieben und gelagert werden.
- EN** Appliance shall be installed, operated and stored in a room with floor area larger than 4 m².
- FR** L'appareil doit être installé, utilisé et entreposé dans une pièce avec une surface supérieure à 4 m².

Follow the manual
This symbol indicates that the operating manual must be observed.

Follow the repair manual
Disposal, maintenance and repair work of the refrigerant circuit may only be carried out in accordance with the manufacturer's specifications and by persons having a certificate of qualification. A corresponding repair manual is available from the manufacturer upon request.

Residual risks

Danger Refrigerant R454C!

H220 – Extremely flammable gas.
H280 – Contains gas under pressure; may explode if heated.

P210 – Keep away from heat, sparks, open flames and other ignition sources. No smoking.
P381 – Eliminate all ignition sources if safe to do so.
P403 – Store in a well-ventilated place.

Warning of electrical voltage

Work on the electrical components must only be carried out by an authorised specialist company!

Warning of electrical voltage

Before any work on the device, remove the mains plug from the mains socket!
Hold onto the mains plug while pulling the power cable out of the mains socket.

Warning

Dangers can occur at the device when it is used by untrained people in an unprofessional or improper way! Observe the personnel qualifications!

Warning

The device is not a toy and does not belong in the hands of children.

Warning

Risk of suffocation!
Do not leave the packaging lying around. Children may use it as a dangerous toy.

Note

Do not operate the device without an air filter inserted into the air inlet!
Without the air filter, the inside of the device will be heavily contaminated. This could reduce the performance and result in damage to the device.

Behaviour in the event of an emergency

1. Switch off the device.
2. In an emergency, disconnect the device from the mains feed-in: Hold onto the mains plug while pulling the power cable out of the mains socket.
3. Do not reconnect a defective device to the mains.

Information about the device

Description of the device

The device uses the principle of condensation to automatically dehumidify rooms.

The fan sucks damp room air through the air inlet, the air filter, the evaporator and to the condenser located behind it. The air is cooled at the cold evaporator until it is below the dew point. Water vapour contained in the room air precipitates on the evaporator fins as condensation or rime. The dehumidified, cooled air is slightly warmed at the condenser and blown out again. The drier air thus conditioned mixes with the air in the room. The humidity in the room where the device is positioned is reduced as air constantly circulates through the device.

The condensate is fed through a pressure-resistant pipe connection and out of the device via the supplied condensation drain hose. For the collection you can for instance place a sufficiently dimensioned collection container beside the construction dryer.

Optionally, the condensed water can be discharged using a retrofitted condensate pump (optional).

For easy operation and transport, the device is fitted with an on / off switch , an operating hours counter, a transport handle and wheels. Two feet with rubber buffers prevent the device from rolling away.

The device can reduce the relative humidity of a room to approx. 35 %.

Because of the heat radiation generated during operation, the room temperature may rise slightly.

Device depiction

3	Air filter
4	Wheels
5	Condensation drain hose
6	Air outlet
7	Stand bar
8	Condensation hose connection

Transport and storage

Note

If you store or transport the device improperly, the device may be damaged.

Note the information regarding transport and storage of the device.

Transport

To make the device easier to transport, it is fitted with a transport handle and two wheels.

Before transporting the device, observe the following:

- Switch off the device.
- Hold onto the mains plug while pulling the power cable out of the mains socket.
- Drain the remaining condensate from the device and the condensation drain hose (see chapter Maintenance).
- Do not use the power cable to drag the device.
- Do not incline the device by more than 45°, for otherwise the device could be damaged.
- Only wheel the device on a level and smooth surface.

After transporting the device, observe the following:

- Set up the device in an upright position after transport.
- After having transported the device in horizontal position, leave the device to rest for 12 to 24 hours, so the refrigerant can accumulate within the compressor. Wait 12 to 24 hours before switching the device back on! Acting contrary might lead to compressor damage and a malfunctioning device. Any warranty claims will be voided in this case.

Storage

Before storing the device, observe the following:

- Drain the remaining condensate from the device and the condensation drain hose (see chapter Maintenance).
- Hold onto the mains plug while pulling the power cable out of the mains socket.
- Drain any possibly remaining condensate.

When the device is not being used, observe the following storage conditions:

- Only store the device in a room measuring more than 4 m².
- Only position the device in rooms where there is no source of ignition (e.g. open flames, an active gas appliance or an electric heater).
- dry and protected from frost and heat
- in an upright position where it is protected from dust and direct sunlight
- with a cover to protect it from invasive dust, if necessary
- Place no further devices or objects on top of the device to prevent it from being damaged.

Assembly and installation

Scope of delivery

- 1 x Device
- 1 x Air filter
- 1 x Condensation drain hose, 19 mm diameter
- 1 x Manual

Unpacking the device

1. Open the cardboard box and take the device out.
2. Completely remove the packaging.
3. Fully unwind the power cable. Make sure that the power cable is not damaged and that you do not damage it during unwinding.

Start-up

When positioning the device, observe the minimum distance from walls or other objects as described in the Technical data chapter.

- Before restarting the device, check the condition of the power cable. If there are doubts as to the sound condition, contact the customer service.
- Only position the device in rooms where potentially leaking refrigerant cannot accumulate.
- Only position the device in rooms where there is no source of ignition (e.g. open flames, an active gas appliance or an electric heater).
- Set the device up in an upright and stable position.

- Do not create tripping hazards when laying the power cable or other electric cables, especially when positioning the device in the middle of the room. Use cable bridges.
- Make sure that extension cables are completely unrolled.
- When positioning the device, keep a sufficient distance to heat sources.
- Make sure that no curtains or other objects interfere with the air flow.
- When positioning the device, particularly in wet areas, secure it locally with an RCD (residual current device) which complies with the respective regulations.

Positioning the device

For the correct positioning of the device, fold out the stand bar as follows:

1.

2.

3.

Inserting the air filter

Note

Do not operate the device without an air filter inserted into the air inlet!

Without the air filter, the inside of the device will be heavily contaminated. This could reduce the performance and result in damage to the device.

- Make sure that the air filter is installed before switching the device on.

Positioning the condensation drain hose

1. Connect the condensation drain hose to the condensation hose connection (8) at the device.
2. Make sure that the condensation drain hose is properly connected to the device and free of damage.
3. Depending on the application, position the end of the condensation drain hose as follows:
 - ⇒ Place a sufficiently dimensioned container (at least 90 litres) beside the device and insert the hose end. Check the filling level of the container regularly.

- ⇒ Position the end of the condensation drain hose above a water drain. For larger distances, a longer hose of the same type can also be used.

- ⇒ The device can also be operated with a condensate pump. Contact your Trotec customer service.
4. Make sure that the condensation drain hose is installed with a continuous decline.

Operation

- Avoid open doors and windows.
- After being switched on, the device operates fully automatically.
- During operation with an external hygrostat (optional) the fan continues to run in dehumidification mode until the device is switched off even after having reached the set target value.

Operating elements

No.	Designation	Meaning
9	Operating hours counter	Indication of operating hours
10	OFF position	Device switched off
11	ON position	Device switched on
12	On/off switch	For switching the device on or off

Switching the device on

Once you have completely installed the device as described in the Start-up chapter, you can switch it on.

1. Make sure that the condensation drain hose has been properly laid and connected. Do not create tripping hazards.
2. Make sure that the condensation drain hose is neither kinked nor jammed and that there are no objects on the condensation drain hose.
3. Make sure that the condensate can run off properly.
4. Turn the on / off switch (12) to the ON position (11).
 - ⇒ The device is switched on.
 - ⇒ The compressor always starts with a delay of approx. 7 s.
 - ⇒ The fan starts approx. 10 s after that.

Continuous operation mode

In continuous operation mode, the device dehumidifies the air constantly, regardless of the humidity.

Hygrostat operation mode (optional)

The device can also be operated with a hygrostat. The hygrostat switches the device on or off depending on the relative humidity.

If you choose to operate the device with an optional hygrostat, set the desired relative humidity at the hygrostat (see instructions of the optional hygrostat).

In doing so, observe the switching point. Provided the external hygrostat activates the compressor via the set humidity value, then hygrostat and drying unit operate correctly. You can tell the incorrect operation of the external hygrostat if the compressor of the device operates below the set value and switches off above it. In this case you need to open the hygrostat (HG 110) and reconnect the connections (an according explanation is provided inside the cover of the HG 110).

Automatic defrost

At low ambient temperatures, ice may form at the evaporator during dehumidification. The device will then carry out an automatic defrost. Dehumidification is briefly interrupted during defrosting. The fan keeps running.

The duration of the defrost process can vary. Do not switch off the device during automatic defrost. Do not remove the mains plug from the mains socket.

Shutdown

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Switch off the device.
- Hold onto the mains plug while pulling the power cable out of the mains socket.
- If necessary, remove the condensation drain hose and any residual fluid from it.
- Clean the device according to the Maintenance chapter.
- Store the device according to the Storage chapter.

Available accessories

Warning

Only use accessories and additional equipment specified in the instructions. Using insertion tools or accessories other than those specified in the instructions may cause a risk of injury.

Designation	Article number
Optional hygrostat for TTK 800	7.430.000.930
Condensate pump TTK 800 incl. installation kit	6.100.003.015
Air filter	7.710.000.170
Starting current limiter ASB 3500	6.100.002.030
Energy consumption meter, MID-compliant	7.140.000.903
External hygrostat HG130	6.100.002.045

Errors and faults

The device has been checked for proper functioning several times during production. If malfunctions occur nonetheless, check the device according to the following list.

The device does not start:

- Check the power connection.
- Check the power cable and mains plug for damage.
- Check the on-site fusing.
- If you operate the device with a hygrostat (optional), check the set value. In order for the construction dryer to operate, the humidity level at the installation site needs to be higher than the set value. Set the hygrostat to a lower value.

The device is running, but there is no formation of condensate:

- Check whether the condensation drain hose is positioned correctly.
- When using the condensate pump: Check the condensation tank and hoses for dirt.
- Ensure that the relative room humidity complies with the technical data.
- If you operate the device with a hygrostat (optional), check the set value. In order for the construction dryer to operate, the humidity level at the installation site needs to be higher than the set value. Set the hygrostat to a lower value.

- Check the air filter for dirt. If necessary, clean or replace the air filter.
- From the outside, check the condenser for dirt (see chapter Maintenance). If the condenser is dirty, have it cleaned by a specialist company or by Trotec.

The device is loud or vibrates:

- Check whether the device is set up in a stable and upright position.

Condensate is leaking:

- Check the device for leaks.

The compressor does not start:

- Check the room temperature. Observe the device's permissible operating range according to the technical data.
- Check whether the overheating protection of the compressor has tripped. Disconnect the device from the mains and let it cool down for approx. 10 minutes before reconnecting it.
- The device might carry out an automatic defrost. During automatic defrost, the device does not dehumidify.

The device gets very warm, is loud or is losing performance:

- Check the air inlets and air filters for dirt. Remove external dirt.
- From the outside, check the device for dirt (see chapter Maintenance). If the inside of the device is dirty, have it cleaned by a specialist company for cooling and air-conditioning or by Trotec.

Your device still does not operate correctly after these checks?

Please contact the customer service. If necessary, bring the device to a specialist company for cooling and air-conditioning or to Trotec for repair.

Maintenance

Activities required before starting maintenance

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Switch the device off.
- Hold onto the mains plug while pulling the power cable out of the mains socket.

Warning of electrical voltage

Tasks which require the housing to be opened must only be carried out by authorised specialist companies or by Trotec.

Note

Install a 'No smoking sign' in the working area.

Refrigerant circuit

Danger

Refrigerant R454C!

H220 – Extremely flammable gas.

H280 – Contains gas under pressure; may explode if heated.

P210 – Keep away from heat, sparks, open flames and other ignition sources. No smoking.

P381 – Eliminate all ignition sources if safe to do so.

P403 – Store in a well-ventilated place.

- The entire refrigerant circuit is a maintenance-free, hermetically sealed system and may only be maintained or repaired by specialist companies for cooling and air-conditioning or by Trotec.
- If working with heat on the refrigerant system or corresponding parts, make sure to provide suitable fire-fighting equipment such as dry powder, CO₂, water vapour or alcohol-resistant foam.

Safety signs and labels on the device

Check the safety signs and labels attached to the device at regular intervals. Replace illegible safety signs!

Cleaning the housing

Clean the housing with a soft, damp and lint-free cloth. Ensure that no moisture enters the housing. Protect electrical components from moisture. Do not use any aggressive cleaning agents such as cleaning sprays, solvents, alcohol-based or abrasive cleaners to dampen the cloth.

Visual inspection of the inside of the device for dirt

1. Remove the air filter.
2. Use a torch to illuminate the openings of the device.
3. Check the inside of the device for dirt.
4. If you see a thick layer of dust, have the inside of the device cleaned by a specialist company for cooling and air-conditioning or by Trotec.
5. Put the air filter back in.

Cleaning the air filter

Note

Ensure that the air filter is not worn or damaged. The corners and edges of the air filter must not be deformed or rounded. Before reinserting the air filter, make sure that it is undamaged and dry!

The air filter has to be cleaned as soon as it is dirty. This is brought to light e.g. by a reduced capacity (see chapter Errors and faults).

1. Remove the air filter from the device.

2. Clean the filter using a slightly damp, soft, lint-free cloth. If the filter is heavily contaminated, clean it with warm water mixed with a neutral cleaning agent.

3. Allow the filter to dry completely. Do not insert a wet filter into the device!
4. Reinsert the air filter into the device.

Cleaning the inside with compressed air

Warning

Risk of injury caused by ejected compressed air upon activation of the compressed air supply. Hold the compressed-air hose away from your body. Pointing the compressed-air hose at another person is prohibited.

The housing cover has to be removed in order to perform cleaning and maintenance tasks inside the device.

1. Remove the air filter from the device.

2. Loosen and remove the screws at the housing cover and remove the cover.

3. Keep the screws (4 in total) safe for later use.

4. Clean the interior of the device by means of compressed air.

5. Reassemble the housing cover on the device. Finally, retighten all screws and insert the air filter.

Cleaning the inside with a high-pressure cleaner

- ✓ The device is switched off.
 - ✓ The device is disconnected from the mains.
1. Remove the air filter from the device.
 2. Use a high-pressure cleaner to clean the air inlet and the fins behind. Observe a minimum distance of 50 cm.

3. Put the air filter back in.

Activities required after maintenance

If you want to continue using the device:

- Reconnect the device to the mains.

If you do not intend to use the device for a considerable time:

- Store the device according to the Storage chapter.

Overview and list of spare parts

Main components

Note: The position numbers of the spare parts differ from those describing the positions of the components mentioned in these instructions.

No.	Spare part	No.	Spare part
1	Front Cover	13	Inlet grill
2	Fanholder and Inlet		Insulation for Inlet grill, 40x3mm
3	Fan	14	Filter guide, 3 pcs
4	Supply Cable with plug	15	Pressure sensitive switch
5	Cable grand M20	16	Defrost valve
5	Nut M20 for Cable grand	17	Evap/cond assembly
6	Compressor Cpl, incl fastners	18	Terminal Block 12-way
7	Outlet grill cpl.	19	Rotary switch
8	Saddle foot	20	operating hours counter
9	Wheel	21	Capacitor 50 μ F
10	Saddle foot \varnothing 25mm tube	22	Capacitor 4 μ F
11	Lifting leg	23	Relay
	Locking ring for lifting leg	24	Frost stat
12	Spring clips		

Disposal

The icon with the crossed-out waste bin on waste electrical or electronic equipment stipulates that this equipment must not be disposed of with the household waste at the end of its life. You will find collection points for free return of waste electrical and electronic equipment in your vicinity. The addresses can be obtained from your municipality or local administration. For further return options provided by us please refer to our website <https://de.trotec.com/shop/>.

The separate collection of waste electrical and electronic equipment aims to enable the re-use, recycling and other forms of recovery of waste equipment as well as to prevent negative effects for the environment and human health caused by the disposal of hazardous substances potentially contained in the equipment.

The device is operated with fluorinated greenhouse gas which can be dangerous for the environment and contribute to global warming when emitted to the atmosphere.

Further information is provided on the nameplate.

Dispose of the refrigerant appropriately and according to the national regulations.

Declaration of conformity

The text below sets out the contents of the declaration of conformity. The signed declaration of conformity can be found at <https://hub.trotec.com/?id=42519>.

Declaration of conformity

in accordance with the EC Machinery Directive 2006/42/EC,
Annex II, Part 1, Section A

Herewith, we – Trotec GmbH– declare that the machinery designated below was developed, constructed and produced in compliance with the requirements of the EC Machinery Directive in the version 2006/42/EC.

Product model / Product: TTK 800

Product type: dehumidifier

Year of manufacture as of: 2020

Relevant EU directives:

- 2011/65/EU: 1 July 2011
- 2014/30/EU: 29 March 2014

Applied harmonised standards:

- EN ISO 20607:2019
- EN 60335-1:2012
- EN 60335-1:2012/A11:2014
- EN 60335-1:2012/A13:2017
- EN 60335-1:2012/AC:2014
- EN 60335-2-40:2003
- EN 60335-2-40:2003/A11:2004
- EN 60335-2-40:2003/A12:2005
- EN 60335-2-40:2003/A1:2006
- EN 60335-2-40:2003/A2:2009
- EN 60335-2-40:2003/A13:2012
- EN 60335-2-40:2003+A11:2012+AC:2013
- EN 60335-2-40:2003/AC:2006
- EN 60335-2-40:2003/AC:2010
- EN 61000-3-2:2014
- EN 61000-3-3:2013
- EN 61000-6-3:2007+A11:2011+AC:2012

Applied national standards and technical specifications:

- None
