## Model indication

Pos.	Reference
1	Cooler module    2, 4 and 6
2	Number of fans    1 - 5
3	Tube rows          4, 6 or 8 tube rows in air direction
4	Fin spacing        4, and 7 mm
5	Fan speed          L = low (1000 rpm) H = high (1500 rpm)
6	Circuiting design    H1, H2 ...
7	Current            400 = 230/400/50/3 230 = 230/50/1
8	Options            For a full survey of all available options see page 4

## Eurovent

Within Europe, a wide variety of published data on capacities are in use, generally depending on national standards. Most in use by the leading manufacturers are national and international standards like DIN, ENV, NEN-EN and ASHRAE. Due to this, customers have not been able to make objective product comparisons, since data published on capacities were based on  $DT_1$ ,  $DTM$ , dry or wet conditions, with or without certification, etc.

To meet the European requirements on EN standards, the European Refrigeration Industry embodied by Eurovent has set standards to guarantee an independent certification procedure for forced convection air cooled condensers based on NEN-EN 327 and unit air coolers based on NEN-EN 328. Being an active member of Eurovent, the capacities of the Alfa Laval commercial cooler programme, as given in the technical documentation, are based on NEN-EN 328 (evaporating temperature  $t_0 = -8\text{ °C}$ , 8 K temperature difference between air-on temperature and evaporating temperature ( $DT_1$ )).

In order to enable air cooler selection for operating conditions, technical documentation should also give capacities for humid/frosted conditions. According to Eurovent these 'frosted conditions' are to be calculated by multiplying 'dry capacities' with a factor 1.15. These data can be found in the capacity tables, in the columns marked "frosted".

## Capacities

**Frosted conditions**

- Lightly frosted coil.
- Relative humidity 85 %.
- Suction gas superheating 62% of the temperature difference ( $DT_1$ ), with a minimum of 3.5 K.
- Refrigerant liquid temperature 30 °C (for  $t_0 = -20\text{ °C}$  and below; liquid temperature 10 °C).

**Evaporating temperature  $t_0$** 

Evaporating temperature  $t_0$  is the saturated temperature according to the pressure at the suction outlet of the cooler.

**Dry conditions**

Cooling capacity where no condensation or ice build-up occurs on the coil (100% sensible cooling). This condition is used by Eurovent to standardise capacity ratings but should not be used when selecting coolers. For cooler selection use the columns marked "frosted".

### General Information

Dual discharge air coolers THOR-D are a further extension to the already wide and flexible THOR range of industrial air coolers. THOR-D dual discharge coolers are characterized by a low silhouette.

Application area: evaporating temperatures of +5 down to -40 °C using either halogen refrigerants, CO<sub>2</sub> or secondary refrigerants.

Capacities (Eurovent SC 2) 4,5 up to 116.1 kW.

Air flow 3,000 up to 60,000 m<sup>3</sup>/h.

### Other THOR models

#### THOR

The THOR series is a wide and flexible range of industrial air coolers fitted with blow-through or draw-through fans. These models have been highly standardised in construction and dimensions, while maintaining flexibility in fin spacings, coil construction and circuiting design.

#### THOR-A

For airsock application Alfa Laval has developed a special airsock cooler range. These THOR-A models are fitted with an airsock ring and fan motors capable of supplying the extra external pressure that is required for the proper functioning of airsocks.

#### THOR-F

Air cooler models THOR-F have been optimized for the refrigerated storage of agricultural products. These cooler models are characterised by an optimised capacity / air volume ratio and a relatively low profile.

All THOR, THOR-D, THOR-F and THOR-A models are also available with stainless steel tubing (TYR range).

### Two-Year Guarantee

Because Alfa Laval has the fullest confidence in the product quality, a two-year full guarantee is given.

### Product Configuration

- Finned coil
  - 3 coil block modules
  - 4, 6 or 8 tube rows deep
  - Cu ripple fin tubing  $\varnothing$  5/8" (smooth tubing for brine)
  - Tube pitch 50 x 50 mm square
  - Corrugated Alu-fins
  - Fin spacings 4, and 7 mm.
- 1-5 Fans, blowing through the coil, available in a range of different executions.
  - Diameters  $\varnothing$  457,  $\varnothing$  508 and  $\varnothing$  560 mm.
  - Motor cables are led to the outside of the cooler casing.
  - Fan motors protection class IP55.
  - 1000 rpm = L design
  - 1500 rpm = H design
- Corrosion resistant casing material:
  - Aluminium/Sendzimir, white epoxy coated (RAL 9003).
- Hinged, enclosed endcovers.
- Hinged drip tray with vertical drains 1 1/4" BSP male.
- Refrigerant distribution optimised to refrigerant applied.
- Fitted with schrader valve on the suction connection for testing purposes.
- Sufficient room for fitting the expansion valve inside.
- Suitable for dry expansion or pumped system.
- Stickers indicate fan direction and refrigerant in/out.
- Delivery in mounting position. Coolers are mounted on wooden beams. Installation can take place with use of a forklift.
- Design pressure 33 bar (H(C)FC) or 6 bar (brine). Higher design pressures on request. Each heat exchanger is leak tested with dry air and finally supplied with a nitrogen pre-charge.

## Options

**■ Defrost systems**

- Hot gas coil in driptray **G1**
- Electric defrost **E1, E4**
- Hot glycol defrost **HW1, HW2**

*Electric defrost for air coolers with pumped refrigerant circulation or in glycol execution on special request only.*

**■ Fan ring heater** **FRH**
**■ Driptray insulation**

- Styropore 10 mm + cladding **I 2**  
*not in combination with electric defrost*
- Foamglass 25 mm + cladding **I 3**

**■ Isolating switch (mounted)** **ISM**
**■ Horizontal drain**

Hinged driptray with horizontal drain at the short side. Available for THOR-D up to 3 fans, but not in combination with driptray insulation I2.

**■ Dual fan speed motors (Dahlander 1500/750)**

*Only available for modules 2 and 4.*

For this fan motor all table values for cooling capacity and air volume need to be adjusted according to the following percentages:

Capacity	Module 2	Module 4
n = 1500 rpm	100 %	90 %
n = 750 rpm	60 %	50 %

Air flow	Module 2	Module 4
n = 1500 rpm	100 %	80 %
n = 750 rpm	50 %	40 %

**■ Secondary refrigerant**

*Air coolers for secondary refrigerant application can be selected with our selection software. Extra information on request.*

**■ Stainless steel 304 casing** **SSC**
**■ Fan motors 400/60/3 or 230/60/1**
Non-standard executions *(on request only)*
**■ Higher capacities**
**■ Special fan motors:**

- Dual fan speed motors
- Variable fan speed motors
- EC fans
- Alternative electrical supply 460/60/3

**■ Built in heater coil sections**

## Fan Ring Heater (FRH, 230 Volt)

incl. mounting gear

Cooler module	Fan diameter mm	Ring heater power W
2	457	450
4	508	500
6	560	500

## Driptray Insulation ( I )

For specific operational conditions the air coolers can be fitted with driptray insulation.

Insulation of the driptray is recommended for air coolers with hot gas defrosting used at a room temperature below -5 °C. For areas with high relative humidity it may also be necessary to insulate other parts of the casing.

At extra cost this driptray insulation can be combined with the usual epoxy coating.

*Note : When selecting driptray insulation the overall height "B" of the coolers (see page 10) increases by the thickness of the insulation material applied.*

## Dual discharge air coolers

## THOR-D

Selection Example DT<sub>1</sub>

Refrigerant	R-404A dx
Selected fin spacing	7 mm
Fan speed H	1500 rpm
Required cooling capacity	30 kW
Air-on temperature	+2 °C
Evaporating temperature	-5 °C

- 1)  $DT_1 = +2 - (-5) = 7 \text{ K}$
- 2) Correction factor  $DT_1 / R-404A : 1.15$
- 3) Multiply required capacity with correction factor :  $30 \times 1.15 = 34.5 \text{ kW}$ .
- 4) Cooler models can be selected in column 'capacity/frosted' with a nominal capacity of 34.5 kW.

For the above mentioned conditions the following models can be selected :

- THOR-D 246-7-H, nom. cap. 32.0 kW
- THOR-D 248-7-H, nom. cap. 39.4 kW
- THOR-D 428-7-H, nom. cap. 32.3 kW
- THOR-D 436-7-H, nom. cap. 39.9 kW
- THOR-D 444-7-H, nom. cap. 39.4 kW

Depending on parameters such as *air flow*, *number of fans* and *dimensions* (see tables) a final cooler model selection can take place.

Capacity values under 'dry conditions' are reference values for Eurovent conditions.

Standard condition SC	Air on temp. °C	Evaporating temperature °C	Factor dry/frosted
SC1	10	0	1.35
SC2	0	-8	1.15
SC3	-18	-25	1.05
SC4	-25	-31	1.01

SC 2 : Nominal capacity for cooling design.

Air-on temperature is the air temperature at the intake side of the coil block.

Changes possible without prior notice

### Fans

In view of its flexible construction, in principle THOR can be supplied with any desired fan.

Depending on the application there is a standard series of fans which match THOR-D perfectly.

These fans can be supplied in both blow-through and draw-through versions.

### Execution

Fans are executed with balanced aluminium or polyamide fan blades, fitted with robust electrolytically galvanized and epoxy coated fan guards according to DIN 31001. Fans are mounted in vibration dampers.

Enclosed design spray-tight motors, protection class IP-55. Motor cables are lead to the outside of the cooler casing.

All motors, with the exception of the 0.18 kW, 230/50/1 motor, are equipped with a thermal safety device built in the windings, connected to separate terminals in the box.

This safety device can therefore be integrated into the control circuit. The electrical control should be arranged preferably with a manual reset device in order to prevent continuous on/off switching (tripping) of the motors. Cable inlet rages from 7 up to 12 mm.

### Air throw

Air throws as given in the tables are for ceiling mounted coolers at  $t = 20\text{ °C}$ , an unrestrained air flow in the cold room and a minimal air velocity of 0.25 m/s at air throw distance.

Air throw values in the tables are single sided values.

Please keep in mind that TYR-D coolers are designed for dual air discharge, so cold air is discharged at the given air throw distance to both sides of the cooler.

### Sound pressure dB(A)

Sound pressure as given in the tables are sound pressure levels in dB(A) according to EN 13487 at 5 m distance in free field conditions. Values may deviate depending on situations at site. The table below gives calculated sound pressure corrections at various distances.

Distance m	Correction dB(A)
1	+ 14
2	+ 8
3	+ 4

550	230/400/3	0.55	0.70	1.7	1.8	2.0	2 x M20 x 1.5
550	230/1	0.55	0.70	5.5	6.0	6.2	2 x M20 x 1.5
1500	230/400/3	1.50	1.50	4.3	4.6	4.9	2 x M20 x 1.5
<b>Execution L, nominal fan speed 1000 rpm</b>							
250	230/400/3	0.25	0.25	1.1	1.1	1.2	2 x M20 x 1.5
180	230/1**	0.18	0.35	2.4	2.5	-	2 x M20 x 1.5
450	230/400/3	0.45	0.45	1.9	2.0	2.2	2 x M20 x 1.5
<b>Execution with 2-speed fan motors, n = 1500 / 750 rpm, Dahlander connection</b>							
370/60	400/3	0.37	0.48	1.4	1.6		2 x M20 x 1.5
		0.06	0.20	0.6	0.6		

\* Motor windings 230 Volt.

\*\* These 230/1 motors are suitable for temperatures down to -20 °C and are not provided with a thermal safety device in the windings.

\*\*\* Absorbed fan motor energy is measured in under laboratory conditions at ambient temperature 20 °C. These values may vary depending on local conditions.

## Defrost Systems

Several forced defrost systems are available. Each defrost system is optimised for specific applications and ambient conditions.

## Electric Defrost (E)

Stainless steel heater elements placed in additional tubes between the evaporator tubes. The elements for the driptray are fitted to the bottom of the inner tray. Both coil and driptray have the same elements.

Standard voltage per element 230 V.

Connection to 230 V / 1 phase or 400 V / 3 phase, connected in star with Zero-Wire.

Total defrost power is given for 400 V / 3 phase with Zero-Wire.

All elements can be withdrawn at the refrigerant connection side. The driptray elements can be taken out after removal of the outer tray. The heater elements are pre-wired and are connected to one or more terminal boxes.

Depending on the ambient temperature and air humidity a number of E-executions are available.

**E1** *Air on temperature down to - 25 °C.*  
Electric stainless steel defrost elements in the driptray. For use in combination with for example hot gas defrost in the coil block.

**E1 + I3** *Air on temperature down to - 35 °C.*  
E1, additionally equipped with an insulated double driptray. Recommended for general use in the low-temperature region.

**E4** *Air on temperature down to - 5 °C.*  
Electric stainless steel defrost elements in the coil block and driptray, low duty.

## Hot Gas Defrost (G)

The driptray can be fitted with a defrost coil (G) to bring it rapidly up to temperature by means of hot gas.

The following G-system is available :

**G1** *Air on temperature down to - 5 °C.*  
Defrost coil under the coil block.

## Hot Glycol Defrost (HW)

**HW1** Hot glycol defrost in coil and driptray.  
*High temperatures.*

**HW2** Hot glycol defrost in coil and driptray.  
*Low temperatures.*
