

Küba SG *industrial*

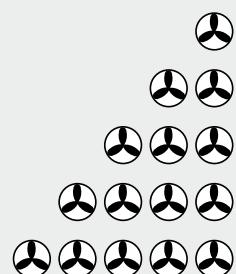

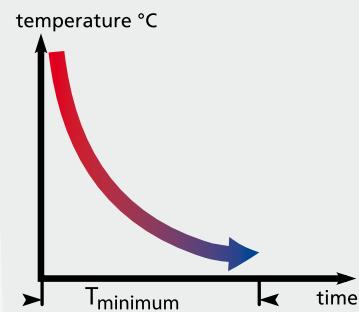

Küba SG industrial: Specific Advantages

The Küba SG industrial is a master of customisation. No matter how great the demand for power, the Küba SG industrial is the answer. Its versatility allows the Küba SG industrial to master the most complex refrigeration tasks.

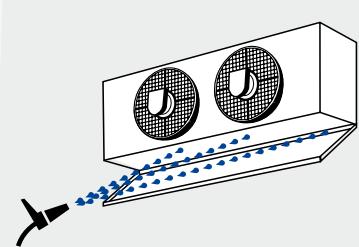

Q_0 5 — 170 kW

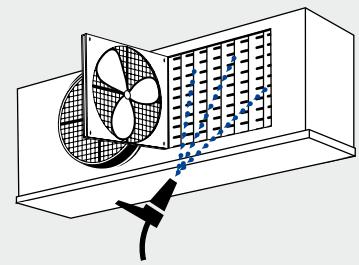

The Küba SG industrial's enormous air volume and directed air flow achieve maximum cooling and freezing speeds.

Even the standard design includes the hinge-down drip tray. This makes it easy to clean and assemble the cooler, to make service work simple.

To clean the heat exchanger, hinged fans are an optional accessory. This allows easy access to the heat exchanger.

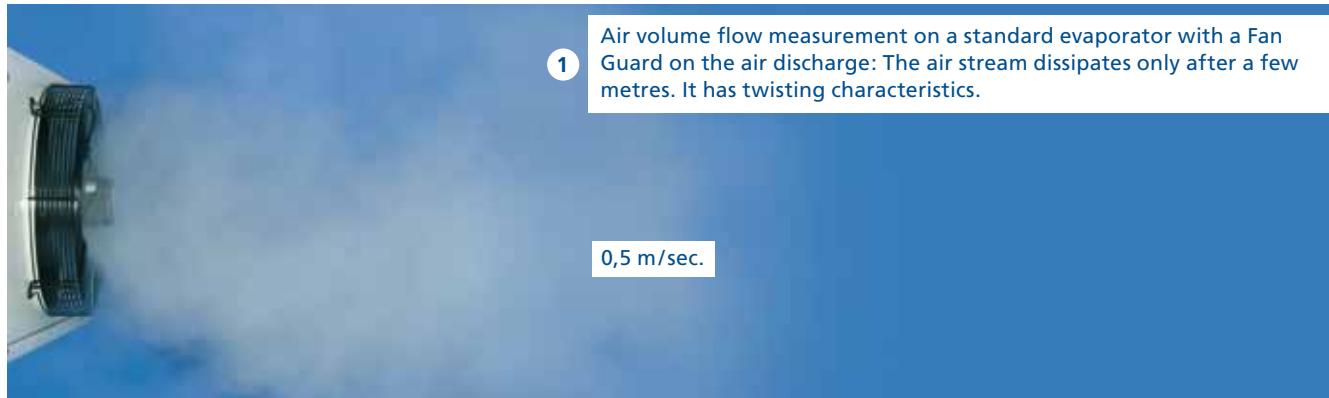

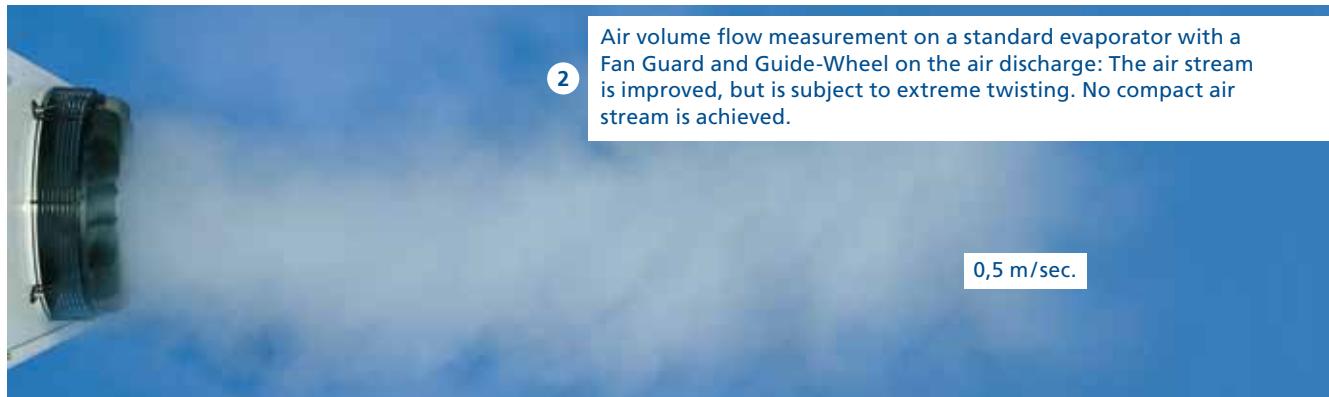

Küba SG *industrial*: Specific Advantages

What are the effects of a long air throw range?

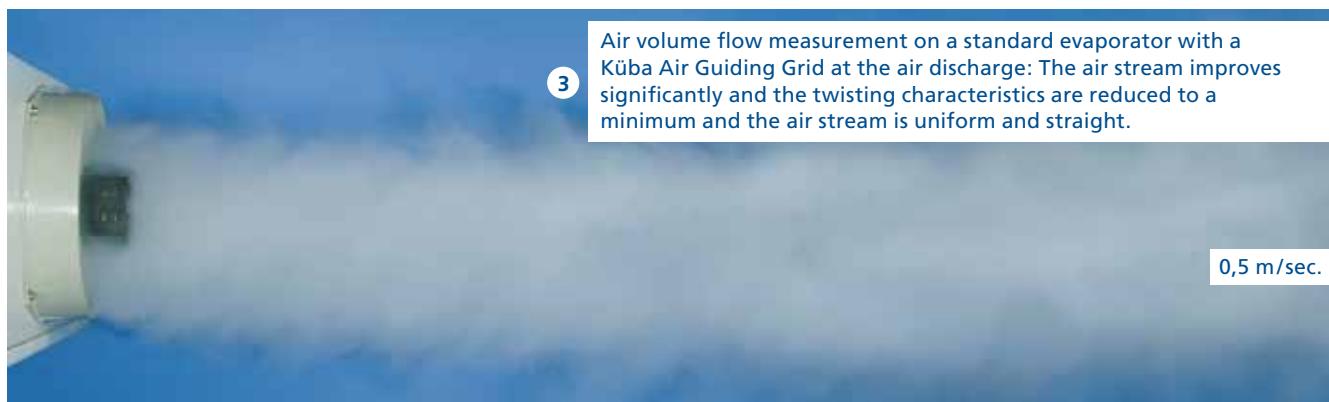

Fan Guard

Fan Guard and Guide-Wheel

Küba Air Guiding Grid

The illustration shows the Küba SG *commercial* line.

The illustrations also apply to the Küba SG *industrial* line.

Air throw comparison at a nominal capacity of 5.95 kW

Küba SG industrial: Specific Advantages

Goods stay at a uniform temperature due to improved air distribution

Refrigeration in large, long cold storage areas can be realized with GEA Küba Air Coolers. Very long throw ranges can be achieved with the Air Guiding Grid. This allows the chilled air to reach the most remote corners of the cold storage area. When used in compliance with product specific stacking, room ventilation is trouble-free, and heat pockets are prevented.

Clear advantages are:

- Even air distribution
- Short cooling times
- Uniform product cooling
- No fluctuations in product temperatures
- Quality is retained

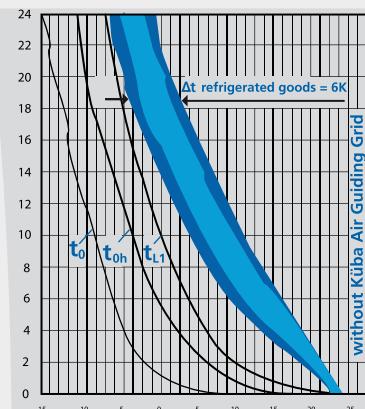

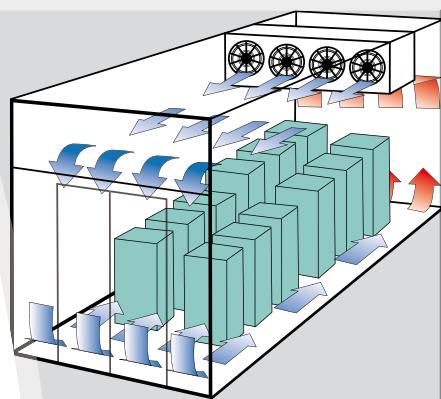

Küba Air Guiding Grid → short cooling times

Cooling curve comparison

Küba high performance SG Air Coolers

Without Küba Air Guiding Grid

- Poor room ventilation
- Large differences in product temperatures: 6K
- Relatively long cooling times

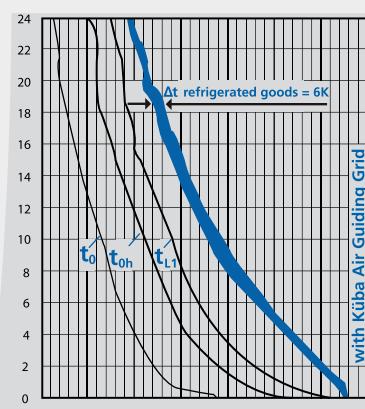

With Küba Air Guiding Grid

- Better distribution of cooled air
- Products are cooled more evenly: 1K
- Short cooling times
- Lower temperature difference (DT1)
- Lower operational costs

Key:

- t_0 = Evaporating temperature at coil outlet
- t_{0h} = Superheated temperature at coil outlet
- t_{L1} = Air entry temperature into the Air Cooler

Küba Air Guiding Grid → More uniform product temperatures

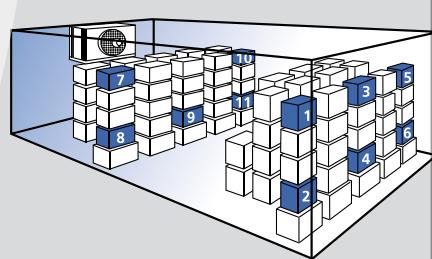

Uniform product temperatures:

As documented by the measurement series
in the cold storage area

To perform the cooling curve comparison, a cold storage area was filled with stacks of goods. The measuring points 1-11 show the development of the product core temperature in relation to cooling time.

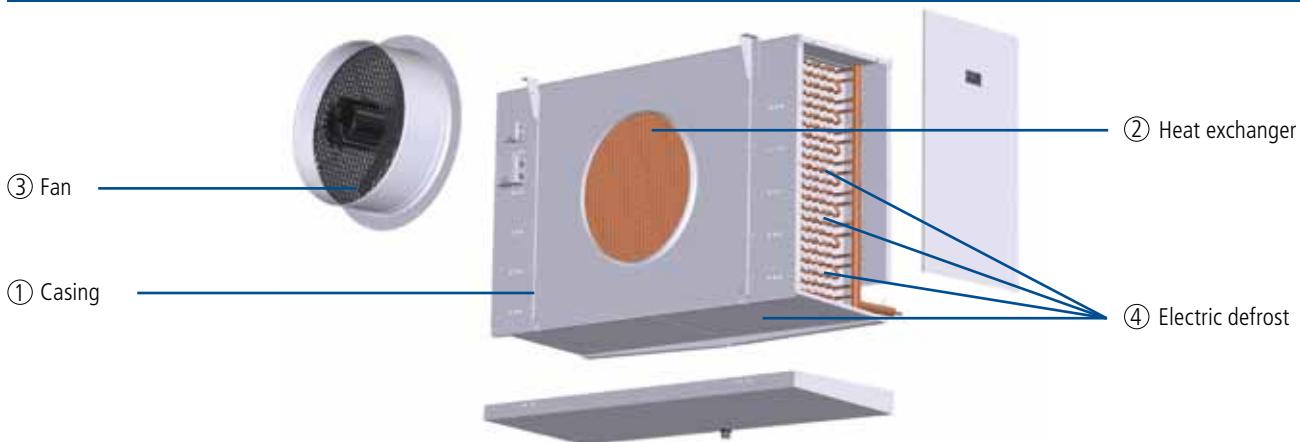

The starting conditions were identical in both trials – entry temperature 24 °C. For the cooler without an Air Guiding Grid, the temperature difference in the stack of goods after 21 hours cooling time was 6K.

The Küba SG with Air Guiding Grid achieved the outstanding result of only a 1K temperature difference.

Construction

1. Casing

- Smooth Sendzimir galvanised steel
- High-grade powder coating, papyrus white RAL 9018
 - Food safe
 - Easy to clean
 - Optimum corrosion protection
- Hinge-down drip tray and removable side panels
- Stainless steel mounting material
- Plastic drain up to 1 1/4", longer than 2", stainless steel

- Application range: -40 °C to +45 °C
- 400±10% V-3~ 50Hz
- In the standard design the fans are equipped with Air Guiding Grid, air duct and contact protection.
- Protection class IP 66
- Insulation class F
- Operating data can be found with Küba Select or in the technical data.
- Optional Controller:

Phase control	<input type="checkbox"/>
Transformer	<input type="checkbox"/>
Delta / star	<input checked="" type="checkbox"/>
Frequency converter with all-pole sinusoidal filter	<input checked="" type="checkbox"/>

2. Heat exchanger

- Fin spacing

SGA.I:	4,5mm
SGB.I:	7mm
SGK.I:	12 mm
- Aligned tube arrangement, spacing 50 x 50 mm
- HFE® tube / fin system
- SG industrial-F: HFC/CO₂**
Küba-CAL® refrigerant distributor from the entire HFC/CO₂ line (up to 32 bar)
Tubing: Cu-special
Fins: Al
End plates: Al
- SG industrial-G: Glycol**
Distributor tubes for multiple injections
Tubing: Cu-special
Fins: Al
End plates: Al
- SG industrial-N: Pump operation, NH₃**
Distributor tubes for multiple injections
Tubing: VA
Fins: Al
End plates: Al

3. Fans

- Ø 500 / 560 / 630 / 710 / 800mm
- With built-in protector to be connected on site

Please observe the manufacturer's information.

Motor label data (max. allowable value +40 °C)

50 Hz

	min ⁻¹	W	A
SG. 50-F41-F85	1400	800	1,40

SG. 63-F41-F85	880	680	1,60
SG. 71-F41-F84	900	1200	2,30
SG. 80-F41-F84	930	2200	3,50

4. Electric defrost

- 230 ±10% V-1~ or 400 ±10% V-3~ -Y
- Heaters with CrNi steel sleeve
- Vapour-tight connections
- Connector cable 1,5 mm² x 1000 mm
- Designed to defrost the heat exchanger quickly and evenly
- To prevent vapor build-up and to promote heat exchange with little loss, the heaters are mounted in special expanded tube sleeves
- Wired ready for connection to the connection box in accordance with VDE specifications

Versions

Motor versions

Normal refrigeration fan guard

- V1.07

For certain applications, i.e. in small spaces and quick cooling rooms, the fan guard version is the right solution.

In this version, the design of the fan unit includes a contact safety grille without the Air Guiding Grid and air duct.

For alternative motor versions, see Küba Select or version overview, pg. 130

Water/brine circulation

- V2...

Tube circuitry and connections for water and brine are available.

Alternative casing versions

Double insulated, hinge-down drip tray

- V3.09

The double-shelled drip tray has 25 mm of insulation. The insulation prevents condensation water from building up on the bottom side of the tray and reduces the transfer of defrosting heat into the cold storage area.

This changes the following dimensions:

Width B: +60 mm
Height H: +30 mm
Depth T: +30 mm

Hinged fans

- V3.10

To make the coolers easy to clean, the fans are mounted with stainless steel hinges.

Defrost versions

All GEA Küba Air Coolers are available with electric defrosting. See nomenclature, p. 72

Hot gas defrost in the drip tray

- Hot gas connection on both sides
- V4.01 Copper
- V4.02 Stainless steel

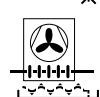

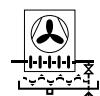

Hot gas in the heat exchanger

- V6.05 Hot gas connection on the heat exchanger

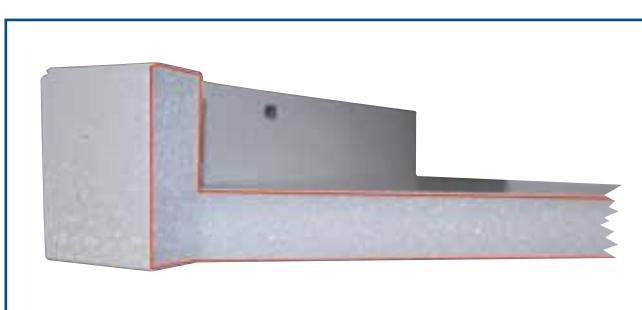

Hot gas in the heat exchanger and in the drip tray, copper design with/without check valve

- Hot gas connection on both sides
- V6.07 with check valve
- V6.08 without check valve

Upon request: additional defrosting

circuit: for defrosting with hot gas. A separate circuit for the hot gas is integrated into the heat exchanger.

Versions

Protection against corrosion

Stainless steel casing

- V3.12

For protection in aggressive cold storage air, i.e. in smokehouses and curing areas. All casing components are composed of stainless steel and are of industrial quality.

- V6.01

Heat exchanger:

Tubing: Cu

Fins: Al „goldlack“ coating

End plates: Al, protective coating

Casing: Sendzimir galvanised steel, protective coating on both sides

- V6.02

Heat exchanger:

Tubing: Stainless steel

Fins: Al „goldlack“ coating

End plates: Stainless steel

Casing: Sendzimir galvanised steel, protective coating on both sides

Refrigerant distributor: Standard Venturi

Stainless steel CAL® distributor upon request

- V6.03

Heat exchanger:

Tubing: Stainless steel

Fins: Al

End plates: Al

Casing: Sendzimir galvanised steel, protective coating on one side

Refrigerant distributor: Standard Venturi

Stainless steel CAL® distributor upon request

- V6.04

Heat exchanger:

Tubing: Cu

Fins: Al „goldlack“ coating

End plates: Al

Casing: Sendzimir galvanised steel, protective coating on one side

Further information regarding corrosion protection can be found on pages 132 to 135

Accessories

Recommended for frozen storage

- Shut-Up®
- Defrosting hood
- Fan collar heaters
- Duct at 5° incline
- Double insulated drip tray
- Insulate the top panel on site

Shut-Up®

The Küba Shut-Up® optimises the defrosting procedure, especially in deep-freeze applications.

Applications

- Frozen storage starting at -18 °C
- Alternating defrosting of the Air Coolers in one room

Advantages (in connection with the defrosting hood)

With Shut-Up® and the defrost hood, a positive accumulation of heat occurs in the Air Cooler during the defrost process. The heat remains in the cooler, which means:

- Defrost times are reduced by more than 50%
- Significant amounts of energy are saved
- No frost build up on the ceiling of the storage room or on the goods due to minimal vapour build-up
- Defrost temperature in the cooler is $\leq 5^\circ\text{C}$

Calculation hint

Due to the additional external pressure, the air quantity and Air Cooler capacity change:

Model	Change in air quantity	Change in rating
Küba SG <i>industrial</i>	-10%	-5%

Selection table

for model	Shut-Up®
SG... Ø	1 piece
SG... Ø Ø	2 pieces
SG... Ø Ø Ø	3 pieces
SG... Ø Ø Ø Ø	4 pieces
SG... Ø Ø Ø Ø Ø	5 pieces

Cooling phase, fans switched on: Shut-Up® is inflated

Defrosting, fans switched off: Shut-Up® closes the Air Cooler

Accessories

Defrost Hood

In conjunction with the accessories mentioned on page 92, the defrost hood optimises the defrost process, especially in deep-freeze applications.

Applications

- Frozen storage starting at -18 °C
- Alternating defrosting of the Air Coolers in one room

Advantages (in connection with Shut-Up®)

With the defrost hood and Shut-Up®, a positive accumulation of heat occurs in the Air Cooler during the defrost process. The heat remains in the cooler, which means:

- Defrost times are reduced by more than 50%
- Significant amounts of energy are saved
- No frost build up on the ceiling of the storage room or on the goods due to minimal vapour build-up
- Defrost temperature in the cooler is $\leq 5^{\circ}\text{C}$

Construction

- The double wall drip tray has 12 mm of insulation
- The casing is made of aluminium, coated (RAL 9018)
- The construction is modular, i.e. 1 module per fan
- Unassembled upon delivery, so the hoods must be mounted on the Air Cooler on site

Module dimensions and weight:

Model	H mm	B mm	T mm	Weight kg	W _{min.} mm
SG 50..1-5	1080	945	800	33	860
SG 56..1-5	1280	945	800	36	860
SG 63..1-5	1380	1145	900	45	960
SG 71..1-4	1680	1345	1280	61	1340
SG 80..1-4	1880	1345	1280	60	1340

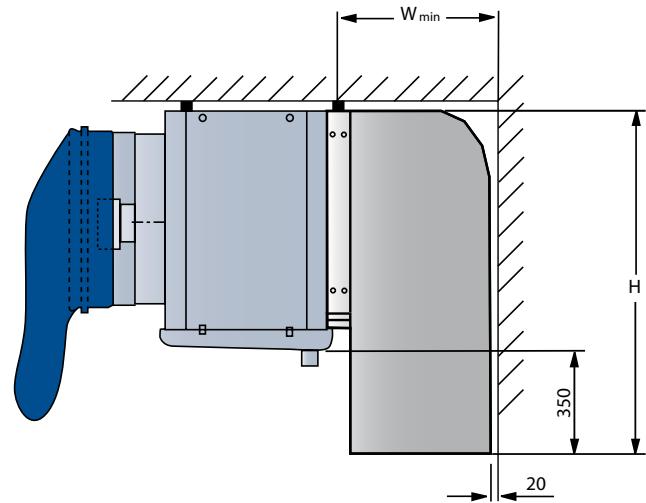

Calculation hint

Due to the additional external pressure, the air quantity and Air Cooler capacity change:

Model	Change in air quantity	Change in cooler rating
SG industrial	-10%	-5%

For deep-freeze applications, GEA Küba engineers recommend an insulated drip tray.

! When using floor brackets, please make sure that you have the correct „defrost hood“.

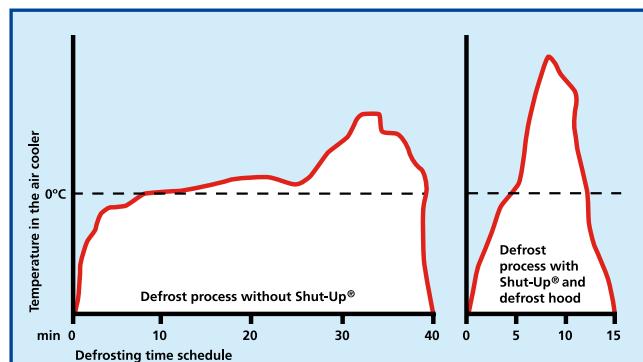

Mode of operation during defrosting:

Shut-Up® is suspended over the fan unit, closing the Air Cooler. Hot air cannot escape. The cold air from the room forms a blocking layer on the outside of the defrosting hood.

- Hot air cannot escape
- A chimney effect is prevented

Defrosting process with Shut-Up® and defrost hood

With our deep-freeze package (Shut-Up® and defrosting hood) you will reduce defrosting time by more than half

Fan collar heater VRB

To prevent the fan blade from freezing up at the fan nozzle of the air coolers in extreme humidity conditions in the freezer and frozen storage area.

The standard Küba SG industrial line is suitable for use with fan collar heaters. We recommend using fan collar heaters for applications below 0 °C for version V1 .60 to prevent temperatures from falling below the dew point.

Accessories

Included in delivery:

Electric tubular heater with stainless steel sleeve
Ø 8.5 mm

Connection ends: 1.5 x 2000 mm

Tension spring: stainless steel

Fan Collar Heater Cover

Benefits:

- Contact protection
- Reduces heat radiation from the fan collar heaters into the Cold Room
- Improves heat conductivity at the collar
- Increases the efficiency of the fan collar heaters
- Protects against slipping

 Can only be used with a metal air duct.

Duct at 5° incline

For complex deep-freeze applications, the duct has a 5° incline to ensure trouble-free operation.

Applications

- Deep-freeze applications at high humidity
- Deep-freeze applications with high-availability, sensitive products (e.g. pharmaceuticals) with few redundant coolers

Advantages

Ventilation ducts with a 5° incline ensures that condensation water runs out of the duct into the drip tray.

- Reduced risk of fan blades at the collar freezing up
- Prevents ice formation on the Air Guiding Grid

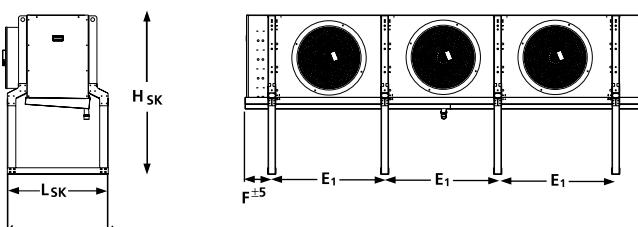

Construction

- Ventilation ducts have a 5° inclination toward the casing as well as an integrated air guiding grid
- Ventilation duct is made of Sendzimir galvanised steel plate, coated (RAL 9018)
- Suitable for installation with the Küba Shut-Up® – with no additional accessories necessary

Calculation hint

The ducts positioned at a 5° incline should always be used along with the Shut-Up®, defrosting hoods, fan collar heaters and insulated drip trays.

	F	=F	page 89		

Accessories

Air Hoses (on site procurement, not available from Küba)

Ventilation can be optimised with textile / PVC air hoses.

Applications

- Applications in work rooms and production areas
- Cooled goods that are sensitive to drafts
(i.e. flowers, ripening cheeses)

Advantages

The air hoses make uniform air distribution possible at very low air speeds.

- Working in a draft-free environment yields low illness rates
- Maximum protection for sensitive cooled goods
- No condensation water: temperatures do not fall below the dew point because air can penetrate the woven material

Calculation hints

Please take the respective pressure drop for the cooler design into consideration.
