Goedhart SCP air coolers Cu/Al

Basic information

Capacity

The listed nominal cooling capacities are based on R404A, DT1 condition -8/-o (SC2), RH of 85% and 4 pole 3 phase fans connected in Δ for the air cooler ranges VCI, VCe, VNS and DVS. For the BC50 range the listed nominal cooling capacities are based on R404A, DT1 condition -25/-18 (SC3), RH of 85% and 4 pole 3 phase fans connected in Δ. Other cooling conditions (refrigerant, coolant, another DT1, DTM, etc.) can be selected with the GEA Goedhart GPC program.

Influence of Coating on Capacity

The use of coated fins, or of a fully coated coil will result in a capacity decrease of approximately 3%

Capacity optimisation

Since Goedhart tries to limit stock products, we are capable of optimising the circuitry of our evaporators. In order to do this, the following information is needed :

- Design capacity
- Air volume
- Refrigerant
- Air on temperature
- Evaporating temperature
- Liquid temperature before expansion valve.

Capacity on DT1

The capacities are based on R-404A direct expansion, DT1 and a RH of 85%. DT1 is the difference between air-on temperature and the evaporation temperature of the cooler. The evaporation temperature is the saturate temperature corresponding to the pressure at the suction outlet of the cooler. The nominal capacities are based on refrigeration temperature of -8°C and DT1 = 8K for the air cooler ranges VCI, VCe, VNS and DVS, for BC50 the nominal capacities in this brochure are based on refrigeration temperature of -25°C and DT1 = 7K.

Correction factors for various evaporation temperatures and temperature differences (DT1) are as indicated in the tables beside. The requested capacity must be multiplied by a correction factor from the table. so that a cooler with the resulting nominal capacity can be chosen from the selection tables.

Q nominal = faktor x Q requested

Capacities for other refrigerants, coolants and conditions can be calculated with the Goedhart GPC selection program.

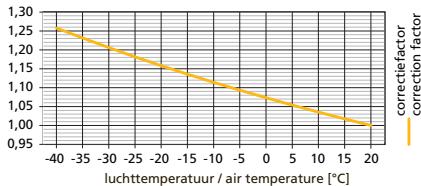

DT1	SC2-DT1 =8K-Air-on=0°C (-8/0)

Goedhart SCP air coolers Cu/Al

Basic information

Fans

Because of the flexible construction of the Goedhart air cooler, in principle it is possible to deliver with different fans. GEA Goedhart selected a standard fan range of Ziehl Abegg (we reserve the right to alter the manufacturer) which fit perfectly on the Goedhart SCP air coolers. The fans can be supplied in both blow-through and draw-through executions. Against an extra price and with extra delivery times stainless steel guards and EC-fans are available.

Execution

The fans meet the ErP2015 directive. The fans have very good aerodynamic features because of the special impeller geometry. This special impeller geometry gives the fan a low noise level and an high efficiency.

1x230V fans are suitable for a room temperature till -25°C. 3x400V fans are suitable for a room temperature till -40°C. When lower room temperatures are desired, special fans are required.

Tension	: 3x400V-50Hz-3 phase : 1x230V-50Hz-1 phase On request 60Hz is possible in 400V - 460V
Protection class	: IP44 / IP54
Color	: RAL9005 (zwart)
Speed controlling:	<ul style="list-style-type: none">- 3 phase AC-motors are suitable for 2-speed regulation by D-Y reconnection at 3x400/690V-50Hz- 3 phase AC-motors are suitable for frequency controller with all-pole sinus filter- 3 phase EC-motors are available with 0-10V or Modbus- 1 phase AC-motors are suitable for phase control and transformator.

The motors are standard executed with a thermo contact (TB) and must be connected to prevent motor damages. The maximum allowable working data in the table and on the name plate of the fans are to operate in an air temperature of +20 °C (air density of $\rho = 1,2 \text{ kg/m}^3$). For air temperatures lower than +20 °C, the current amperage can be calculated by using the diagram multiplication factor, suitable thermal overloads can then be selected. In our Goedhart GPC selection program also the values in the working point are indicated.

Sound data

The mean sound pressure (L_{PA} @ 3m ± 2 dB (A)) each air cooler is a calculated indication value according to the EN13487 standard parallel pipe. Goedhart uses the fan manufacturer's sound power level (L_{WA}) at the inlet side of the fan. Changes to or by the fan or the product, affect the sound, in these cases, consult the manufacturer for the new indication value. In critical sound requirements, we advise you to consult an expert.

ZAPLus fans

The Goedhart VCE 800 mm fans are fitted as ZAPLus fans. The ZAPLus is a bionic axial fan in a compact housing made of strong composite material, which integrates the motor and control, and on which a protection guard can be mounted. The special design of the fan wing ensures high efficiency and low noise. If desired, also other Cu / Al Systematic customized air coolers can be delivered with this special fan. Ask your Goedhart contact for the possibilities and applicability.

ZAPLus fan optional

The most efficient solution for your project

In good hands at Goedhart

Even before you place an order at Goedhart, a complete and professional team is at your disposal, providing you with thorough advice. We use the latest CAD / CAM developments in the field of parametric engineering. For less complex projects, please consult the electronic selection program GPC. Our goal is to achieve an optimal and cost efficient cooling system for your business. Flexible, easy to use, quality and safety, which are the key targets of our approach.

Flexible

Every industry and therefore every customer has different requirements and has different needs. That is why we do not believe in mass production of fully standardized products. Depending on your program requirements, you can choose from standardized cooling systems available in different sizes (level 1 series), customized cooling systems consisting of standard product modules (level 2) to fully customized solutions produced (level 3). In order to achieve the objectives of our clients, we use the so-called "customized production philosophy. For that Goedhart has a wide range of materials and a highly efficient and flexible production.

The size of your cooling system and your requirements regarding investment costs and efficiency levels, lifespan and environment are leading to the choice of the type of refrigerant. Goedhart supplies air coolers and air cooled condensers suitable for natural (NH₃ and CO₂) and synthetic refrigerants. Based on your program requirements our sales engineers will provide a customized advice.

User friendly

Not only the fact that Goedhart delivers high-tech products, makes our customers satisfied. Besides quality, service and ease of use is our top priority. Because each heat exchanger is made on behalf of the customer, additional specifications related to wiring and connections can be achieved during the production process.

Subsequently we deliver the air cooler packed or crated on request, taking into account the mode of installation. Your air cooler or condenser is delivered directly ready for installation, which is the service you can expect from Goedhart.

Quality and safety

Both production sites (Sintmaartensdijk and Nymburk) are certified to ISO 9001, ERP2015 and European PED pressure systems. This means that the products of Goedhart meet the strictest safety standards. Intervention of an external inspector by the PED certification no longer needed. This increases the efficiency of the design and manufacturing process and saves the initial cost.

Additionally Goedhart embraces the Japanese Kaizen philosophy that stands for "do it better, make it better, improve even if it goes well. All employees, from management to the cleaning crew are involved and motivated to suggest improvements. Not once a month or a year, but every day. The quality of this awareness increases work morale and has a positive effect on the efficiency. It has to do GEA Goedhart evolve from a traditional metal company into a modern and sustainable industry.

Goedhart VCI air coolers

Cooling and freezing

The extensive range Goedhart VCI single discharge ceiling mounted industrial air coolers are suitable industrial cooling and freezing applications. The possible air direction is blow-through or draw-through (please specify when ordering).

Coil block

Tube distance	: 50x50 mm straight
Fin spacing	: 4, 6, 7, 8, 10 and 12mm
Material	: 15mm o.d internally plain (p) or enhanced (i) copper tubes : aluminium HT-fins

Goedhart VCI coil blocks have copper tubes mechanically expanded into fully collared aluminium fins. A good thermal contact is achieved by expansion of the tubes into the fin collars, that are also utilised as spacers to provide a constant distance between the fins. All coolers are pressure tested to 30 bar (lower by cooling mediums) and are supplied with a light over pressure charge of dried air. Suitable for all known refrigerants and coolants, with the exception of NH₃.

Casing

- Construction for ceiling mounting
- Casing material of galvanized sheet steel
- Standard white epoxy spray finishing (RAL 9003)
- Bend/header projection by end covers, easy removed for maintenance
- Standard refrigerant connections are positioned on the left hand side of the unit when looking with the direction of the airflow.
- Cleanable execution optional
- Possible defrost by hot gas spiral or electric defrost elements will be fixed to the bottom side of the coil.
- Stainless steel fasteners

Goedhart VCI features

- For cooling and freezing applications
- Blow-through or draw-through execution possible
- Available with internally plain or enhanced copper tubes
- Consisting of 1500 models
- Capacity range from 2,5 to 265,0kW.
- EC fan technology possible
- Fans not standard wired to a junction box (optional)
- Suitable for most refrigerants / coolants with exception of NH₃
- Goedhart VCI is delivered on a wooden frame for easy mounting
- Many options and accessories available (see p. 48)

logistics centers

Goedhart VCe air coolers Powerful quiet

The Goedhart VCe models are highly effective, for example, for application in food and beverage distribution centers, logistics centers and production shop floors. As required by market demand, models in the Goedhart VCe/VRe series feature few but large fans. With the newly designed modules the speed of the fans and the air velocity through the coil are reduced!

Coil block

Tube distance	: 50x50 mm straight
Fin spacing	: 4, 6, 7, 8, 10 and 12mm
Material	: 15mm o.d internally plain (p) or enhanced (i) copper tubes : aluminium HT-fins

Goedhart VCe coil blocks have copper tubes mechanically expanded into fully collared aluminium fins. A good thermal contact is achieved by expansion of the tubes into the fin collars, that are also utilised as spacers to provide a constant distance between the fins. All coolers are pressure tested to 30 bar (lower by cooling mediums) and are supplied with a light over pressure charge of dried air. Suitable for all known refrigerants and coolants, with the exception of NH₃.

food & beverage

production shop floors

Casing

- Construction for ceiling mounting
- Casing material of galvanized sheet steel
- Standard white epoxy spray finishing (RAL 9003)
- Bend/header projection by end covers, easy removed for maintenance
- Standard refrigerant connections are positioned on the left hand side of the unit when looking with the direction of the airflow.
- Cleanable execution optional
- Possible defrost by hot gas spiral or electric defrost elements will be fixed to the bottom side of the coil.
- Stainless steel fasteners

Goedhart VCe features

- For cooling and freezing applications
- Blow-through or draw-through execution possible
- Available with internally plain or enhanced copper tubes
- Consisting of 132 models
- Capacity range from 14,5 to 188,0kW at SC2.
- EC fan technology possible
- Highly effective air cooler due to new designed modules and fans
- Up to 6 fans, fan diameter 500, 630, 710 and 800 mm
- Suitable for most refrigerants / coolants with exception of NH₃
- Met inwendig gladde of inwendig vergrootte buis beschikbaar
- ZAplus fan optional (most energy efficient fan on the market today)
- Goedhart VCe is delivered on a wooden frame for easy mounting

Stepped fin spacings
