Air cooled condensers

Cu/Al

R404A

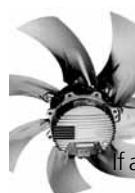

Air cooled condenser options

Control Options

There are various optional control packages available, including fully variable speed controlled products using inverter control or the latest EC fan control system.

The control options include:

- EC speed control
 - Inverter speed control
 - Triac speed control
 - Dual speed step control
 - Single speed control
- If a speed control method is utilised Goedhart recommends adding the option of internal motor protection.

air temperature during peak ambient and load conditions. Air temperature reduction is achieved by spraying water into the incoming airstream (please see Goedhart's Adiabatic brochure for further details).

Other Options

Goedhart offers a wide range of accessories and additional options, including anti-vibration mounts and optional leg extensions - to enhance fresh air in difficult locations. For further details please contact your Goedhart representative.

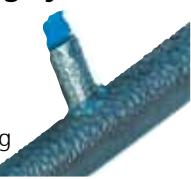

Sub-Cooling

Sub-cooling is achieved by the use of an integrated sub-cooling section which utilises approximately 10% of the coil surface.

This provides up to 7°C of sub-cooling at the standard rating condition of 15K DT1. Operating below 15K DT1, the amount of sub-cooling is reduced. The total heat of rejection capacity, inclusive of sub-cooling, will be reduced by 5%.

Adiabatic Cooling System

The adiabatic cooling system is designed to enhance the thermal performance by reducing the effective incoming

Vertical Mounting

Flat bed units may be specified with the coil vertical for horizontal air flow systems.

The system should be designed so that refrigerant passes from the condensing section into a liquid receiver or liquid trap to prevent gas from entering the sub-cooling section. Some larger units will have the end cooling outlet at the opposite end to other connections.

Capacity Data

Dewpoint

The capacities shown in this brochure are rated at dew point. This is the pressure/temperature condition at which a refrigerant gas begins to condense on the surface. As some refrigerants have significant glide (e.g. R407A/ 407C), the saturated gas and saturated liquid temperatures are not necessarily the same. It is important to ensure that all the components of a system are selected using the same rating method.

Whilst the use of mid-point does make selection easier, it is difficult to measure on site. At the catalogue rating point of 15K DT1, mid point capacities would be approximately 9% higher for R407C than the equivalent dew point figures shown in the tables.

Quality Assured

Goedhart is a quality assured company to ISO 9001:2000 encompassing Performance Testing, Manufacturing Systems and Inspection Procedures.

The range is certified with performances rated in accordance with B5 EN 327 and sound with EN13487. Data covered includes: performance, sound power, mean sound pressure, power input and surface area.

CE Marking

Goedhart's condensers are CE marked under the 'Low Voltage Directive'. Under the 'Pressure Equipment Directive', they are category 1 or 'SEP' and therefore excluded from it.

Energy Labelling

The energy efficiency of the air cooled condensers is rated in terms of a set of energy efficiency classes from A to E on the label, A being the most energy efficient, E the least efficient. The labels also give other useful information to the customer as they choose between various models. Rating is based on the ratio of nominal duty to power input with banding as in the table below.

Extremely low	$R > 110$
Very low	$70 < R \leq 110$
Low	$45 < R \leq 70$
Medium	$30 < R \leq 45$
High	< 30

Where $R = \text{Nominal Capacity} / \text{Total fan power input}$

Goedhart KOAL-S E

The KOAL-S E range of air-cooled condensers is based upon the well established E fin heat exchange matrix, combined with the HyBlade® range of fans from EBMPapst. This combination offers a versatile and economical solution to many refrigeration and air conditioning applications.

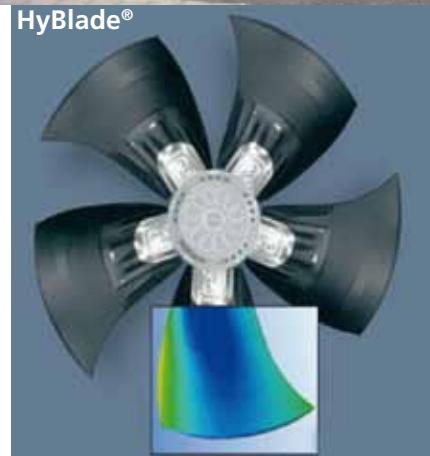

The range consists of one to eight fans in three coil depths and modules with 500 and 630 mm 4, 6 and 8 pole fans. This results in a wide range of capacities, noise levels and footprints to meet the diverse requirements of the industry.

Optional extras for the KOAL-S E range include vertical orientation (1 to 4 fan), multi circuiting, integral sub cooling section, alternative fin materials and coating. Control options include fan cycling, variable speed (including EC) and individual fan isolators. The KOAL-S E range is also available as a dry cooler designated KOAD-S E.

Model selections can be made either directly from the catalogue or by contacting your Goedhart representative to select for you the required air cooled condenser.

KOAL-S E Features

- 3 Module length sizes (A,B,C)
- 500mm or 630mm HyBlade® fansets
- 4,6,8 pole or EC
- Optional coil fin materials and coating
- Standard powder coated, RAL7036 (Platinum Gray) robust casework. RAL 9010 Bright on request.
- factory fitted or separate control options
- Compact design Vertical coil (1-4 fans) or Horizontal coil (1-8 fans)
- Wall mounting kits available for Vertical coil 1-4 fan units

Type description

KOAL-S EA 1 2 4 H - N6 04 - AL

KOAL-S E = range

A, B, C = module length

1 or 2 = bank of fans

1, 2, 3, 4 = fans per bank

2, 3, 4 = coils row

H = Horizontal = orientation

= Vertical air direction

V = Vertical

= Horizontal air direction

N5=500mm, N6=630mm = Fan type

AC pole 04, 06, 08, EC, = Motor speed
XX=without fans

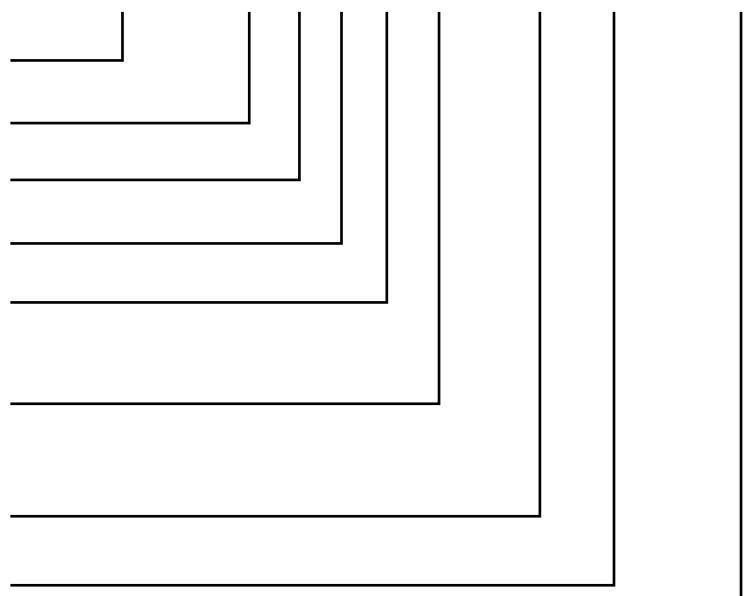

AL = Copper tubes/Aluminium fins

AV = Copper tubes/Vinyl coated aluminium fin

CU = Copper tubes/Copper fins

BG = Blygold tubes and fins

ALMG = Copper tubes/Sea water resistant (Almg) fins
