

# Water chillers

AQUACIAT 2

High energy efficiency with  
**R410A**  
 Compact and quiet  
**Scroll** compressors  
 Brazed plate heat exchangers  
 Self adjusting electronic **control system**

Cooling capacity: 20 to 290 kW  
 Heating capacity: 20 to 285 kW

Cooling or heating

Hydraulic pack

Heat recovery

## USE

The **AQUACIAT 2 series LD-LDC-LDH** or **ILD-ILDC-ILDH** water chillers or heaters with air-cooled condensers are medium capacity units particularly adapted for heating and air conditioning applications in the fields of Offices, Healthcare, Industry, Administration, Commercial and Residential buildings.

These standard packaged units are designed for outdoor installation; no particular precautions have to be taken against adverse weather conditions.

An optional XTRAFAN version allows if necessary the possibility of mounting an air duct on the fan(s) discharge in the case of air recycling risk or for an acoustic treatment on site.

To operate in **COOLING** or **HEATING** mode, these units use outside air as the only external source; this permits the evacuation of heat in summer or the supply of thermal energy for heating in winter.

Connected to a heating or cooling floor, to fan coil units or to an air handling unit, the reversible Aquaciat 2 Series **ILD-ILDC-ILDH** permits easy heating and air conditioning of buildings.

Each unit is assembled, electrically wired (control and capacity), charged with refrigerant, and tested in factory.

The installation is very simple and the only operations to be carried out on site are the electrical wiring and water connections.

## RANGE

### AQUACIAT 2 series LD

Cooling only chillers without hydraulic equipment.

### AQUACIAT 2 series LDC - LDH

Cooling only chillers with hydraulic equipment, water pump only, or pump and buffer tank.

### AQUACIAT 2 series ILD

Reversible air/water cooled models without hydraulic equipment.

### AQUACIAT 2 series ILDC - ILDH

Reversible air/water cooled models with hydraulic equipment (circulating water pump only or pump and buffer tank).

### DESCRIPTION

The standard **AQUACIAT 2 series LD-LDC-LDH (cooling only)** or **series ILD-ILDC-ILDH (reversible)** are delivered with the following components:

- air-cooled condenser with propeller fan motor assembly,
  - chilled water evaporator (or hot water condenser on reversible models),
  - capacity control system on chilled or hot water,
  - starting automatic control, electrical compartment:
    - . Power supply : 3~50Hz 400V (+6%/- 10%) + earth
    - . Control circuit: 1~50Hz 230V
- (transformers are mounted on the unit in the standard version),
- cabinet for outdoor installation.

80 to 300

#### ■ Conformity with the EC European directives

- Machines EC 98 / 37
- Electromagnetic EMC 2004/108/CE
- Under pressure equipment DESP EC 97 / 23:
  - category 2 for LD - LDC - LDH 80V à 1100V
  - category 2 for ILD - ILDC - ILDH 80V à 700V
  - category 3 for ILD - ILDC - ILDH 702V à 1100V
- Low voltage 2006/95/CE

#### ■ Conformity to standards

- EN 60-204 , EN 378-2 (NFC15 - 100 France).

# Water chillers

## Control functions or safety devices

- Water flow control
- Thermostatic expansion valve
- High and low refrigerant pressure safety devices
- Safety relief valves on refrigerant circuit
- Temperature sensors and pressure transducers
- Chilled water flow switch mounted
- Unit starting sequence,

## Electrical box

The electrical box is fully wired and contains all the electric components and the control process unit (CPU) board. It controls all the functions of the machine and allows operation monitoring, adjustment of the water temperature settings, or the interface with an external managing system.

The electrical box includes:

- Power and control circuit
- Wiring numbering
- Main safety circuit breaker on front panel with handle
- Control circuit transformer
- Protection circuit breakers on power and control circuits
- Compressor motor contactor(s)
- Main earthing
- Microprocessor electronic control system
- Free contacts for remote information or alarms.

## ELECTRONIC CONTROL SYSTEM

# Connect 2

CIAT microprocessor and CPU electronic control system with centralized controls and monitoring of internal operating status.

### Includes:

- Run, Stop, Reset or Remote control functions,
- COOLING or HEATING mode selection switch,
- Output. RS485 output for BMS control (ModBus-JBus),
  - . Additional voltage free output adapter board ,
  - . Adapter for remote control (optional).
- Analogical multi-language LCD screen and LED indicators,

### Functions:

- Monitoring of operation information by:

- . direct display of messages in different languages
- . direct display of temperatures and pressures
- Global compressors control with starting sequence, counting and equalization of compressors running times
- Auto-adaptive and advanced functions with a control system adjustment on the parameters drift
- Capacity stage control system on multi compressors as a function of the cooling or heating requirements on the water temperatures
- Control of the internal operating parameters
- Second setting point control
- Direct display of water temperatures and pressures
- Diagnosis of operating status and faults:
  - HP/LP, water flow, compressor motor(s), anti-frost
- Anti-short cycle protection
- Remote management and remote control
- Master/slave control of two units on the same water loop with alternation of the master unit and the slave unit based on the running times.
- Setpoint adjustable via a 4-20 mA signal
- Weekly schedules

## OPTIONAL EQUIPMENT (KIT FOR ON-SITE MOUNTING)

### Main options

- Additional potential free contact boards,
- Remote control box,
- Phase control = rotation direction, phase absence, under and over voltage (factory mounted size 350 to 1100),
- SOFT START (factory mounted size 350 to 1100),
- Anti-freeze protection,
- Fan speed control (factory mounted for 350 to 1100 sizes),
- Water filter 800 microns as standard equipment on LD-LDC-LDH or ILDC-ILDH, and optional accessory on LD-ILD,
- Evaporator and condenser flexible connections,
- Water adjustment kit including pressure gauge manifold, control valve and stop valve,
- Twin pump on sizes 180 to 1100 (factory mounted for 350 to 1100 models).
- 15 kW extra heater kit (ILD, ILDC, ILDH 80 to 150)
- Extra heater MODULE kit 15-30-45-60 kW (ILD, ILDC, ILDH 180 to 300)
- MULTICONNECT management up to 8 units.
- Management 4 extra heater
- LONWORKS protocol (gateway)
- Handling for container (350 to 1100)

## SOUND LEVELS

The **AQUACIAT 2** range design integrates the "noiseless" assembly technology for attenuation of vibrations and sound power sources:

- Scroll compressor(s) located away from the air flow
- Scroll compressor(s) mounted on antivibration mounts
- Piping dissociated from the unit structure
- Low speed fan(s)
- Automatic air flow adjustment
- Resilient mounts to be positioned between the ground and the unit as standard equipment

**NOTE:** Acoustic pressure levels depend on the installation conditions and consequently are only given as an indication.

Only the sound power levels are comparable and certified.

Compliance with ISO 3744 standard  $L_p = L_w - 10 \log S$

## XTRAFAN FAN SYSTEM (OPTIONAL EQUIPMENT)

AquaCiat2 units 80V to 700V models, for chillers only LD-LDC-LDH series or reversible HEAT PUMPS ILD-ILDC-ILDH series, can be equipped with an XTRAFAN option.

In comparison with standard electric motors controlled by a traditional variator of frequency, this type of electric motor with electronic poles switching equipment and permanent magnet rotors, is characterized by excellent mechanical efficiency and a particularly low noise level, regardless of the load on the shaft.

### Main description

The XTRAFAN option offers a broad range of functions allowing for particularly flexible installation conditions, notably:

- the possibility of being installed in a cramped space, for example on a terrace surrounded by walls, where only a discharge with a static pressure from 100 to 200 Pascals in a duct allows a use without recycling or mixing air to the condenser intake,
- the installation in a particularly noise-sensitive urban environment, where only a suitable sound trap adapted to the air discharge can allow operation,
- the guarantee of obtaining continued operation during temperature peaks in hot climates such as the Middle East, thanks to an "over-boost" function of the condenser fan speed,
- an auto-adjustable speed variation function allowing a highly protected "all season" operation in cooling mode for the industrial process including rigorous winter periods with an external temperature of -20°C,
- the possibility of precisely adjusting on site the fan speed "just enough" to obtain an optimal air discharge pressure, or a maximum noise level tolerated by the environment of the machine,
- an improvement in terms of the EER efficiency and the electrical consumption of the chiller in cooling mode, directly proportional to the refrigerating load requested by the installation.

### Technical specifications and operating range

The XTRAFAN option allows the user to chose one of three possible operating functions of the machine:

- a fortified running of the chiller thanks to the "over boost" fan function in free discharge, in order to extend on full load the outside temperature range from +46 to +50°C,
- reaching an intermediate available static pressure of 100 to 125 Pa with the rated air flow, allowing a duct air discharge at the condenser outlet in order to avoid fan recycling phenomena,
- reaching a maximum static pressure from 130 to 200 Pa according to models at the air discharge with a low air flow, recommended for on-site installation of a sound trap on the air discharge.

	HIGH outside temperature Fan over boost			RATED Static pressure			MAXIMUM Static pressure
