Goedhart FC38S

Goedhart FC38D

Goedhart FC38L

Goedhart

Goedhart FC38

The range Goedhart FC38 standard ceiling mounted air coolers are standard air coolers for cooling and freezing applications (FC38S), working/preparation rooms and storage rooms for humidity sensitive products (FC38D) and for cold storage rooms with height limitation (FC38L).

The standard FC38 aircoolers are suitable for all known refrigerants and not corrosive coolants, with the exception of NH₃.

Type description

FC38Si(dx) 6.2.40.7-230-E

FC38S =Ceiling mounted air coolers

2 = Number of fans

FC38D = Dual discharge air coolers

40 = Fan diameter in cm

FC38L = Extra low air cooler

7 = Fin spacing

i = internally enhanced tubes

230 = 1x230V Fan tension

p = plain tubes

400 = 3x400V Fan tension

(dx) = R404A

E = Electrical defrost

(G) = coolant

H = Hot gas defrost

6 = number of tubes deep

General features

Coil block

- Tube distance : 38x33 mm versprongen
- Tubes : 12mm o.d copper tube
- I= internally enhanced tubes for refrigerants (dx)
- P= internally plain tubes for coolants(G) and refrigerants (dx)
- Fins : aluminium HT-fins
- Fin spacing : 4 mm : Suitable for applications with air temperatures above 0°C and with expected limited frost
- : 7 mm : Suitable for applications with air temperatures below 0°C and expected frost
- A good thermal with the fins contact because the copper tubes are mechanically expanded into fully collared aluminium fins.
- The suction header is executed with a Schräder valve for testing applications
- All coil blocks for refrigerants are pressure tested to 40 bars. All coil blocks for coolants are pressure tested to 15 bars.
- FC38 aircoolers are supplied with a light overpressure charge.

General features

Defrost systems

Casing

- Standard refrigerant connections are fixed on the left hand side of the unit when looking with the direction of the air flow.
- Construction suitable for mounting to the ceiling.
- The FC38 casing is made from galvanized sheet steel , with exception of:
 - FC38S driptray is hinged and made from light aluminum.
 - FC38D has a fixed galvanized driptray.
 - FC38L driptray is hinged and made from light aluminum.
- Goedhart FC38L air cooler is executed with a short splash plate as standard.
- The casing has a corrosion resistant white epoxy spray finish (RAL 9003).
- Almost all fixing materials are made of stainless steel to prevent corrosion.
- A possible hot gas spiral or electric defrost elements will be fixed to the bottom side of the coil

Options

P.E.D.

All air coolers produced by Goedhart comply with the Pressure Equipment Directive 97/23/EC . PED certificates can be downloaded from www.goedhart.nl.

Guarantee

Goedhart gives in conformity with her general conditions of delivery the following guarantee period on the Goedhart FC38 air coolers:

- within a 12 month period of product use
- at the latest within 18 months after the time of delivery.

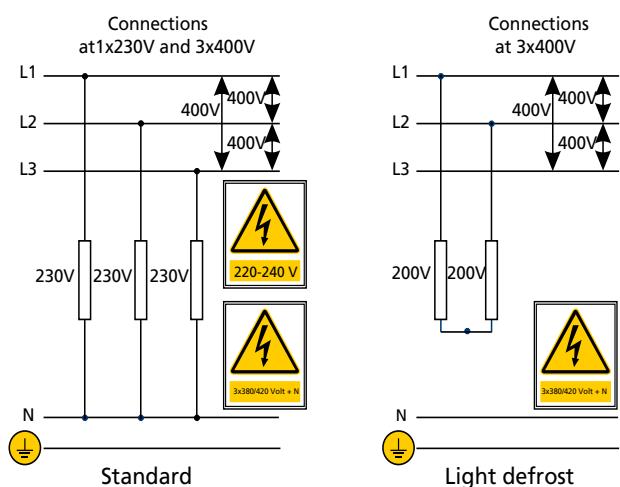

Sound data

The mean sound pressure ($L_{pA} @ 3m \pm 2 \text{ dB (A)}$) each air cooler is a calculated indication value according to the EN13487 standard parallel pipe. Goedhart uses the fan manufacturer's sound power level (L_{WA}) at the inlet side of the fan. Changes to or by the fan or the product, affect the sound, in these cases, consult the manufacturer for the new indication value. In critical sound requirements, we advise you to consult an expert.

For room temperatures where rime formation can be expected and where the coil can not be defrosted by the room air, electrical or hot gas defrost is necessary

Electrical defrost

On request FC38 can be provided with electrical defrost. FC38 is always delivered with heavy defrost. The heater elements are rated for 220/240 V and are 400/420 V with zero wire supply. The stainless steel heater elements are fitted in the coilblock in inner tubes which form a highly conductive medium between the heaters and the fins. In the drip-tray, the heater elements are fitted to the bottom side of the underside of the aluminum inner tray. The heater elements in the coil block are removable from the header side of the unit, whilst the tray heater elements can be removed once the outer tray has been taken off.

Hot gas defrost

The coil block is suited for hot gas defrost (hot gas supply through the suction header). The drip tray can be provided with a copper hot gas spiral, which is enclosed in special aluminum profiles, which are rigidly secured to underside of the aluminum inner tray.

Mounting & Maintenance

FC38 is delivered in a wooden crate. FC38S will be delivered with the separate driptray. When crated, FC38 can be handled by crane or fork-lift truck, which makes it very easy to mount. The driptray of the FC38S is delivered separately. For maintenance and instructions see our manual delivered on order or can be downloaded from our web site www.goedhart.nl.

Fans

Fans

FC38 aircoolers are executed with 2 fan manufactures:
 EBM : Ø250, Ø300, Ø350, Ø400 and Ø450
 Ziehl Abegg : Ø500

(We reserve the right to alter the manufacturer)

The fans are suitable for operation in air temperatures between -30 °C to +40 °C. When the air temperature is lower than -30 °C, special fans are needed. These special fans have a longer delivery time. The protection class is IP44. The fans are neither available with stainless steel protection guards nor stainless steel arms.

The technical data in the table are the same as on the motor name plates and is valid for an air temperature of +20 °C. Also the data are given for working in an air temperature of 0 °C and -20 °C.

1x230V-50Hz

The standard connection tension for the EBM fans is 230V-50Hz-1 phase for the fan diameters Ø250, Ø300, Ø350, Ø400 en Ø450.

The fan motors are standard equipped with internally connected thermo-contacts.

3x400V-50Hz

The EBM Ø450 fan is on request available in 230/400V-50Hz-3 phase. The fan is executed with a thermal contact.

The standard connection voltage for the Ziehl Abegg Ø500 is 400/690V-50Hz- 3phase (on request 230V-50Hz-1 phase). This fan is equipped with thermo contacts.

Correction factors

Correction factors DT1 (=Air-on)

The nominal capacities of the Goedhart FC38i(dx) and FC38p(dx) air coolers are based on R-404A direct expansion, DT1 and a RH of 85%. DT1 is the difference between air-on temperature and the evaporation temperature of the cooler. The evaporation temperature is the saturated temperature corresponding to the pressure at the suction outlet of the cooler.

The nominal capacities:

$$\begin{aligned} (\text{SC1}) \quad t_{\circ} &= 0^{\circ}\text{C} \text{ and } \text{DT1}= 10 \text{ K} \\ (\text{SC2}) \quad t_{\circ} &= -8^{\circ}\text{C} \text{ and } \text{DT1}= 8 \text{ K} \\ (\text{SC3}) \quad t_{\circ} &= -25^{\circ}\text{C} \text{ and } \text{DT1}= 7 \text{ K} \end{aligned}$$

Correction factors for various evaporation temperatures and temperature differences (DT1) are as indicated in the tables below. The requested capacity must be multiplied by a correction factor from the table, so that a cooler with the resulting nominal capacity can be chosen from the selection tables.

Q nominal = factor x Q requested

Capacity optimization

To achieve the best possible combination of application, refrigerant and capacity, Goedhart can optimise the coil circuiting, depending on the specific conditions under which the products will be used. FC38 is a standard product to ensure shorter delivery times. The circuiting of these evaporators has been optimized according to the most commonly used coolants/refrigerants and conditions. Specific applications can vary from this, our sales department is there to assist you in selecting the best circuiting for your application.

Correction factors for coolants

The nominal capacities of the Goedhart FC38p(G) air coolers are based on an air-on temperature of 12°C, a RH of 85% and:

Water	: in / out temperatuur	= +1/+5°C
E-Glycol	: in / out temperatuur	= - 2/+3°C
P-Glycol	: in / out temperatuur	= - 2/+3°C
Pekasol	: in / out temperatuur	= - 2/+3°C
Freezium : in / out temperatuur		= - 2/+3°C

Correction factors for various air-on temperatures and refrigerants or secondary coolants are as indicated in the tables below. The requested capacity must be multiplied by a correction factor from the table, so that a cooler with the resulting nominal capacity can be chosen from the selection tables.

Q nominal = faktor x Q requested

* = Sound pressure indication (LpA) at 3 m distance each air cooler (+/- 2 dB(A)), free field conditions, according EN13487

Air cooler details

F38Lp(dx) - R404A

Declarations

Connection ≤ 35 mm : Declaration of incorporation (SEP)
 Connection 42mm and 54 mm : module A
 Group of fluid : 2
 PS : 28 bar
 TS : +55 / -40 °C

Goedhart delivery programm

Goedhart catalogue air coolers

Goedhart delivery programm

Goedhart engineered-to-order air coolers

Goedhart air cooler for every application

For Contractors and Original Equipment Manufacturers (OEM) related to the industrial refrigeration industry, GEA Goedhart B.V. offers an unlimited range of air coolers and air cooled condensers in several configurations.

Depending on the application, the optimum configuration will be selected in close cooperation with our customers.

Options on aluminium fins

- Goldlack coated fins
- Seawater resistant aluminium fins (AlMg)

Applications

Cooling	Freezing
Cold stores / Distribution centres	Cold stores / Distribution centres
Food processing rooms	Tunnel / spiral freezers
Fruit storage	Slaughter houses
Banana ripening storage	Automotive testing rooms
Greenhouse conditioning	Ski domes

Pressure Equipment Directive (P.E.D.)

All aircoolers produced by Goedhart comply with the Pressure Equipment Directive 97/23/EC. PED certificates can be downloaded from www.goedhart.nl.
